Appendix J1: Vehicle Miles Traveled Analysis

TECHNICAL MEMORANDUM

To:	Dr. Kali Chaudhuri KPC Development Company, LLC	Date:	December 7, 2022
From:	Keil D. Maberry, P.E., Principal Zawwar Saiyed, P.E., Associate Principal Yi Li, Transportation Engineer I Linscott, Law and Greenspan, Engineers	LLG Ref:	2.22.4560.1
Subject:	***Vehicle Miles Traveled (VMT) Analysis for the Proposed KPC Coachella Specific Plan, Coachella***		

As requested, Linscott, Law & Greenspan, Engineers (LLG) is pleased to submit this Vehicle Miles Traveled (VMT) Analysis Technical Memorandum for the proposed KPC Coachella Specific Plan project (herein after referred to as "Project") in the City of Coachella, Riverside County, California. This Technical Memorandum presents the VMT screening criteria, analysis methodology, impact thresholds, analysis, findings, and conclusions. It should be noted that the approach and methodology outlined in this Technical Memorandum are consistent with the *County of Riverside Transportation Analysis Guidelines for Level of Service, Vehicle Miles Traveled (Dated December 2020),* which provides additional detail on the language and analysis procedures described in this Technical Memorandum.

The following sections of this Technical Memorandum summarize the Project description, County of Riverside VMT screening criteria, analysis methodology, VMT impact thresholds, VMT analysis, and conclusion.

PROJECT DESCRIPTION

The Project site is generally located on the north side of the I-10 Freeway in the City of Coachella, Riverside County, California. The Project applicant is proposing a Specific Plan for the development of various mixed-uses on approximately 2,700 acres of land. The KPC Coachella Specific Plan will include a broad range of land uses including residential, commercial, entertainment, schools, parks, other public facilities, and open space. The Specific Plan will be made up of five villages, further divided into planning areas. The proposed Project consists of a mixed-use master plan with:

- 1,679 DU Single Family Detached Housing
- 3,027 DU Multifamily Housing (Low-Rise)
- 2,838 DU Multifamily Housing (Mid-Rise)
- 538 DU Senior Adult Housing – Single Family
- 1,456 DU Senior Adult Housing – Multifamily
- 2,831 Kindergarten – 12th Grade Students

- 1,399,135 SF Shopping Center (Retail)
- 466,382 SF Office
- 375 Rooms Hotel
- 100,000 SF Casino
- 10,000-Seat Live Theater
- 449.7-Acres in Public Parks

Primary access for the Project site will be provided via the proposed Avenue 50/I-10 Interchange as well as an extension of the Vista Del Norte Road from the west. The Project land uses are anticipated to be completed by Buildout Year 2045.

Figure 1 presents the vicinity map that illustrates the general location of the Project site and surrounding street system while ***Figure 2*** displays the existing site aerial of the current site layout. ***Figure 3*** presents the conceptual site plan for the Project, prepared by KPC.

PROJECT SCREENING CRITERIA

Under the VMT methodology, screening is used to determine if a project will be required to conduct a detailed VMT analysis. The following section discusses the various screening methods outlined in the *County of Riverside Transportation Analysis Guidelines for Level of Service, Vehicle Miles Traveled (Dated December 2020),* and outlines whether the Project will screen-out, either in its entirety, or partially based on individual land uses.

Small Projects Screening

The *County of Riverside Transportation Analysis Guidelines for Level of Service, Vehicle Miles Traveled (Dated December 2020)* states:

> *"This applies to projects with low trip generation per existing CEQA exemptions or based on the County Greenhouse Gas Emissions Screening Tables, resulting in a 3,000 Metric Tons of Carbon Dioxide Equivalent (MTCO2e) per year screening level threshold. Presumed to cause a less-than-significant impact:*
>
> - *Single Family Housing projects less than or equal to 110 Dwelling Units; or*
> - *Multi Family (low rise) Housing projects less than or equal to 147 Dwelling Units; or*

- *Multi Family (mid-rise) Housing projects less than or equal to 194 Dwelling Units; or*
- *General Office Building with area less than or equal to 165,000 SF; or*
- *Retail buildings with area less than or equal to 60,000 SF; or*
- *Warehouse (unrefrigerated) buildings with area less than or equal to 208,000 SF; or*
- *General Light Industrial buildings with area less than or equal to 179,000 SF; or*
- *Project GHG emissions less than 3,000 Metric Tons of Carbon Dioxide Equivalent (MTCO2e) as determined by a methodology acceptable to the Transportation Department; or*
- *Unless specified above, project trip generation is less than 110 trips per day per the ITE Manual or other acceptable source determined by Riverside County."*

Based on the above, the proposed Project will not screen-out since it is not listed in any of the small projects' categories listed above.

Projects Near High Quality Transit Screening

The *County of Riverside Transportation Analysis Guidelines for Level of Service, Vehicle Miles Traveled (Dated December 2020)* states:

> *"High quality transit provides a viable option for many to replace automobile trips with transit trips resulting in an overall reduction in VMT. Presumed to cause a less-than-significant impact:*
>
> - *Within a ½ mile of an existing major transit stop; and*
> - *Maintains a service internal frequency of 15 minutes or less during the morning and afternoon peak commute periods."*

Based on the above, the proposed Project will not screen-out since it is not near high quality transit.

Local-Serving Retail Screening

The *County of Riverside Transportation Analysis Guidelines for Level of Service, Vehicle Miles Traveled (Dated December 2020)* states:

> "*The introduction of new Local-serving retail has been determined to reduce VMT by shortening trips that will occur. Presumed to cause a less-than-significant impact:*

- *No single store on site exceeds 50,000 SF; and*
- *2)Project is local-serving as determined by the Transportation Department."*

Based on the above, the proposed Project will not screen-out since it is not a Local-Serving retail project.

Affordable Housing Screening

The *County of Riverside Transportation Analysis Guidelines for Level of Service, Vehicle Miles Traveled (Dated December 2020)* states:

> *"Lower-income residents make fewer trips on average, resulting in lower VMT overall. Presumed to cause a less-than-significant impact:*
>
> - *A high percentage of affordable housing is provided as determined by the Riverside County Planning and Transportation Departments."*

Based on the above, the proposed Project will not screen-out since it is not an affordable housing project.

Local Essential Service Screening

The *County of Riverside Transportation Analysis Guidelines for Level of Service, Vehicle Miles Traveled (Dated December 2020)* states:

> *"As with Local-Serving Retail, the introduction of new Local Essential Service shortens non-discretionary trips by putting those goods and services closer to residents, resulting in an overall reduction in VMT. Presumed to cause a less-than-significant impact if:*
>
> - *Project is local-serving as determined by the Transportation Department; and*
> - *Local-serving and Day care center; or*
> - *Police or Fire facility; or*
> - *Medical/Dental office building under 50,000 square feet; or*
> - *Government offices (in-person services such as post office, library, and utilities); or*
> - *Local or Community Parks."*

Based on the above, the proposed Project will not screen-out since it is not a local essential service project.

Map-Based Screening

The *County of Riverside Transportation Analysis Guidelines for Level of Service, Vehicle Miles Traveled (Dated December 2020)* states:

> *"This method eliminates the need for complex analyses, by following existing VMT data to serve as a basis for screening smaller developments. Note that screening is limited to residential and office projects. Presumed to cause a less-than-significant impact:*
>
> - *Area of development is under threshold as shown on screening map as allowed by the Transportation Department."*

Based on the above, the proposed Project will not screen-out since map-based screening is not available for the proposed Project site.

Redevelopment Projects Screening

The *County of Riverside Transportation Analysis Guidelines for Level of Service, Vehicle Miles Traveled (Dated December 2020)* states:

> *"Projects with lower VMT than existing on-site uses, can under limited circumstances, be presumed to have a non-significant impact. In the event this screening does not apply, projects should be analyzed as though there is no existing uses on site (project analysis cannot take credit for existing VMT). Presumed to cause a less-than-significant impact:*
>
> - *Project replaces an existing VMT-generating land use and does not result in a net overall increase in VMT. "*

Based on the above, the proposed Project will not screen-out since it is a new development project and not a redevelopment project.

Based on the above, the proposed Project will not screen-out, either in its entirety, or partially based on individual land uses, thus requiring a full VMT analysis.

VEHICLE MILES TRAVELED (VMT) ANALYSIS METHODOLOGY

As required by the *County of Riverside Transportation Analysis Guidelines for Level of Service, Vehicle Miles Traveled (Dated December 2020)*, projects not screened out through the steps above should complete VMT analysis and forecasting through the RIVCOM model to determine if they have a significant VMT impact. This analysis shall include both "Project-generated VMT" and "Project's effect on VMT" estimates under the four scenarios listed below:

- Baseline Conditions

- Baseline Plus Project
- Cumulative No Project
- Cumulative Plus Project

The following section is to determine the VMT measure and threshold of significance for application to a land use project. Significance thresholds are based on land use type, broadly categorized as efficiency and net change metrics. ***Table 1*** presents the threshold basis that will be presented in this Technical Memorandum.

Table 1. Threshold Basis

Threshold Basis	Efficiency	Net Change
Example Land Use	Residential, Office, Industrial	Retail, Medical Office, Sports Venue
Measure for VMT Threshold	Per capita, per employee	Regional VMT change
Customer Component	No	Yes

Efficiency metrics include VMT/Capita and Work VMT/employee. "Net Change" refers to the net change in regional VMT and it is used for elements that include a significant customer base, such as commercial uses.

Based on the above, a VMT analysis for the proposed Project was conducted utilizing RIVCOM to determine the County of Riverside average and Project's residential VMT, office VMT and retail VMT, and the County of Riverside, and the following:

- VMT per Capita
- VMT per Employee
- Regional VMT Change

It should be noted that according to ***Appendix E*** as contained in the *County of Riverside Transportation Analysis Guidelines for Level of Service, Vehicle Miles Traveled (Dated December 2020)*, it can be presumed that a land development project will not have a significant impact under Cumulative conditions if it is not determined to have one under Baseline conditions unless there are known circumstances, as determined by Transportation Department, that might alter this outcome. Unless specifically required by the Transportation Department, Project analysis for Cumulative conditions is only required if there is a finding of a significant impact under the Baseline Plus Project conditions.

Additionally, for Specific Plans and Community Plans, Riverside County requires that Cumulative analysis be completed irrespective of the findings of the Baseline

Plus Project conditions. Further, No Project and Plus Project conditions under both the Baseline and Cumulative must provide total Regional VMT values. Note that the Regional VMT values are for informational purposes and are not used as the basis for the determination of a significant impact.

VEHICLE MILES TRAVELED (VMT) IMPACT THRESHOLDS

As previously discussed, a project that does not meet the screening criteria will require the preparation of a detailed transportation analysis. The project VMT will be evaluated in order to determine if the project is expected to cause a significant transportation impact. The VMT significance criteria as stated in the *County of Riverside Transportation Analysis Guidelines for Level of Service, Vehicle Miles Traveled (Dated December 2020)* is detailed below:

The County adopted the county-wide average VMT as the threshold of significance. The thresholds of significance are summarized in ***Table 2***.

Table 2. VMT Threshold of Significance

Land Use	Threshold of Significance
Residential	Existing county-wide average VMT per capita
Office	Existing county-wide average VMT per employee
Retail	Net increase in total VMT

Please note a project would result in a significant project-generated VMT impact if its VMT exceeds the VMT threshold based on its respective land use.

VEHICLE MILES TRAVELED (VMT) ANALYSIS

Summarized in the section below are the average VMT per Capita, VMT per Employee and Regional boundary VMT values utilizing RIVCOM for the County of Riverside and the proposed Project. It should be noted that the Project is located in multiple Traffic Analysis Zones (TAZs) and they are combined as such. Project development totals were converted into Socio-Economic Data (SED) and inputted into RIVCOM. ***Figure 4*** presents the RIVCOM TAZ Map for the proposed Project.

1) Residential Land Uses

The proposed Project is anticipated to have 9,538 DU and utilizing the clustering algorithm for RIVCOM SED, the population factors of 3.45 for the Year 2018 and 2.84 for the Year 2045 are utilized, as presented below:

Residential Factors & Population	
Land Use	Residential
Size	9,538 DU
Population Factor (Baseline)	3.45 Population/DU
Population (Baseline)	**32,913**
Population Factor (Cumulative)	2.84 Population/DU
Population (Cumulative**)**	**27,127**

Baseline Project-Generated VMT – As shown below, the proposed Project average baseline Project-generated VMT per Capita is 16.74% less than the County of Riverside baseline VMT per Capita threshold:

Baseline Project-Generated VMT per Capita	
Baseline County of Riverside VMT/Capita (Threshold)	14.88
Project Baseline Residential VMT	407,839
Project Baseline Population	32,913
Baseline Project-Generated VMT/Capita	12.39
Compared to the County of Riverside Threshold	**16.74% Lower**

Cumulative Project-Generated VMT – As shown below, the proposed Project average cumulative Project-generated VMT per Capita is ***8.54%*** less than the County of Riverside cumulative VMT per Capita threshold:

Cumulative Project-Generated VMT per Capita	
Cumulative County of Riverside VMT/Capita (Threshold)	15.89
Project Cumulative Residential VMT	394,246
Project Cumulative Population	27,127
Cumulative Project-Generated VMT/Capita	14.53
Compared to the County of Riverside Threshold	**8.54% Lower**

Based on the criteria outlined in this report, the proposed Project's residential land uses will not exceed the County of Riverside baseline or cumulative VMT per Capita threshold and thus will not have a significant VMT impact for neither the baseline nor cumulative conditions for the residential land uses.

2) Office Land Uses

The proposed Project is anticipated to have 5,948 employees by utilizing the *County of Riverside General Plan Appendix E-2: Socioeconomic Build-out Assumptions and Methodology* as presented below:

Employee Factors[1] & Employees	
Land Use	Office
Agriculture	0.05 Employee/Acre
Commercial Retail	500 SF/Employee
Commercial Office	300 SF/Employee
Open Space – Mineral Resources	0.03 Employee/Acre
Open Space - Recreation	0.15 Employee/Acre

Baseline Project-Generated VMT – As shown below, the proposed Project average baseline Project-generated VMT per Employee will need to be reduced by ***5.41%*** to meet the County of Riverside baseline VMT per Employee threshold:

Baseline Project-Generated VMT per Employee	
Baseline County of Riverside VMT/Employee (Threshold)	18.30
Project Baseline Work VMT	115,056
Project Baseline Employees	5,948
Baseline Project-Generated VMT/Employee	19.34
Compared to the County of Riverside Threshold	**5.41% Reduction Needed**

Cumulative Project-Generated VMT – As shown below, the proposed Project average cumulative Project-generated VMT per Employee will need to be reduced by ***3.69%*** to meet the County of Riverside cumulative VMT per Employee threshold:

[1] County of Riverside General Plan Appendix E-2: Socioeconomic Build-out Assumptions and Methodology.

Cumulative Project-Generated VMT per Employee	
Cumulative County of Riverside VMT/Employee (Threshold)	17.31
Project Cumulative Work VMT	106,927
Project Cumulative Employee	5,948
Cumulative Project-Generated VMT/Employee	17.98
Compared to the County of Riverside Threshold	**3.69% Reduction Needed**

Based on the criteria outlined in this report, the proposed Project's office land uses will exceed the County of Riverside baseline and cumulative VMT per Employee threshold and thus will have a significant VMT impact for both the baseline and cumulative conditions for the office land uses.

3) Retail Land Uses

As described in the above section, the retail land use SED was coded into RIVCOM.

Baseline Project's Effect on VMT – As shown below, the baseline Plus Project link-level boundary County-wide VMT will need to be reduced by ***0.87%*** to meet the baseline no Project link-level boundary County-wide VMT threshold:

Baseline Project's Effect on VMT	
Baseline No Project link-level boundary County-wide VMT (Threshold)	60,874,265
Baseline Plus Project link-level boundary County-wide VMT	61,408,606
Compared to the County of Riverside Threshold	**0.87% Reduction Needed**

Cumulative Project's Effect on VMT – As shown below, the cumulative Plus Project link-level boundary County-wide VMT is ***0.18%*** less than the cumulative no Project link-level boundary County-wide VMT threshold:

Cumulative Project-Generated VMT	
Cumulative No Project link-level boundary County-wide VMT (Threshold)	84,233,703
Cumulative Plus Project link-level boundary County-wide VMT	84,079,221
Compared to the County of Riverside Threshold	**0.18% Lower**

Based on the criteria outlined in this report, the proposed Project's retail land uses will increase the baseline link-level boundary County VMT under the plus Project

condition compared to the no Project condition and thus will have a significant VMT impact for the baseline conditions for the retail land uses.

Further, based on the criteria outlined in this report, the proposed Project's retail land uses will decrease the cumulative link-level boundary County VMT under the plus Project condition compared to the no Project condition and thus will not have a significant VMT impact for the cumulative conditions for the retail land uses.

It should be noted that a significant majority of the retail development will be local-serving retail and restaurant uses with building sizes less than 50,000 SF, which would screen out under County and OPR Guidelines but in order to be conservative, VMT mitigation measures will be identified to reduce the significant baseline retail VMT impact to less than significant.

VMT MITIGATION MEASURES

When project VMT exceeds the threshold(s) of significance, the project will need to mitigate its CEQA transportation impact. The type and size of the project will determine the most appropriate mitigation strategies for VMT impacts. For large projects such as general plans or specific plans, VMT mitigations should concentrate on the project's density and land use mix, site design, regional policies, and availability of transit, bicycle, and pedestrian facilities. For smaller projects such as an individual development project, VMT mitigations will typically require the preparation of a TDM program. A TDM program is a combination of strategies to reduce VMT. The program is created by an applicant for their land use project based on a list of strategies agreed to with City of Coachella staff.

As referenced in the *OPR Technical Advisory*, the California Air Pollution Control Officers Association's *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity, Designed for Local Government, Communities, and Project Developers* Report, Chapters 3 - Transportation, December 2021, (CAPCOA Report) quantifies the reduction in vehicle miles traveled (VMT) associated with a particular mitigation measure. The CAPCOA VMT reduction strategies include built environment changes and transportation demand management (TDM) actions.

The Transportation Demand Management (TDM) strategies are sub-categorized into the following:

1) Land Use

2) Trip Reduction Program

3) Parking or Road Pricing/Management

4) Neighborhood Design

5) Transit

6) Clean Vehicles and Fuels

It may be noted that there are rules and combined maximums for calculating the VMT reduction when applying multiple mitigation measures. To safeguard the accuracy and reliability of the methods while maintaining their case of use, the following rules should be followed when considering reductions achieved by transportation measures.

Combining Measures Across Scales

According to the CAPCOA, there are sixteen (16) quantified measures at the Project/Site scale that can be combined with each other and seventeen (17) quantified measures at the Plan/Community scale that can be combined with each other. *The GHG reductions of transportation measures from different scales of application should never be combined*.

Combining Measures Within a Subsector

Effectiveness levels for multiple measures within a subsector may be multiplied to determine a combined effectiveness level. The CAPCOA recommends that measures reductions within a subsector be multiplied. This will take the following form:

$$Reduction_{subsector} = 1 - [(1 - A) * (1 - B) * (1 - C)]$$

Where A, B, and C are the individual measures reduction percentages for the measures to be combined in each subsector. In addition, each subsector has a maximum allowable reduction.

Combining Measures Across Subsectors

The CAPCOA report adopts 70 percent as a maximum for the combined VMT impact from the following four subsectors: Land Use, Neighborhood Design, Parking or Road Pricing/Management, and Transit:

$$Reduction_{multi-subsector} = 1\text{-}\ [(1 - Land) * (1 - Design) * (1 - Parking) * (1 - Transit) \leq 70\%$$

Please note that this multi-subsector maximum purposefully excludes the Trip Reduction Program subsector.

Table 3 presents the CAPCOA TDM strategies that quantify potential VMT reductions by implementing each approach. It should be noted that not all TDM strategies will be applicable to the Project. The first column indicates the CAPCOA

Report section that discusses the methodology for quantifying the VMT reduction associated with the corresponding measure. A measure's maximum effectiveness in VMT reduction is indicated in the last column. One or a combination of these mitigation measures could be utilized to offset the impact, fully or partially.

Recommended Mitigation Measures

The recommended mitigation measures for the proposed Project's office land use consists of:

- T-7. Implement Commute Trip Reduction Marketing
- T-8. Providing Ridesharing Program

T-7. Implement Commute Trip Reduction Marketing

This measure will implement a marketing strategy to promote the project site employer's Commute Trip Reduction (CTR) program. Information sharing and marketing promote and educate employees about their travel choices to the employment location beyond driving such as carpooling, taking transit, walking, and biking, thereby reducing VMT and GHG emissions.

Utilizing the CAPCOA T-7 formula as shown below:

$$A = B * C * D$$

Where A is the percent reduction in VMT emissions from the project/site employee commute VMT; B is the percent of employees eligible for the program; C is the percent reduction in employee commute vehicle trips, with the value of "-4%"; and D is the adjustment from vehicle trips to VMT, with the value of "1".

Since 100% of employees will be eligible for the program, the Project can get a maximum VMT reduction of up to ***4.00%.***

T-8. Provide Ridesharing Program

This measure will implement a ridesharing program and establish a permanent transportation management association with funding requirements for employees. Ridesharing encourages carpooled vehicle trips in place of single-occupied vehicle trips, thereby reducing the number of trips, VMT and GHG emissions.

Utilizing the CAPCOA T-8 formula as below:

$$A = B * C$$

Where A is the percent reduction in VMT emissions from the project/site employee commute VMT; B is the percent of employees eligible for the program; and C is the percent reduction in employee commute VMT, with the value of "-4%".

Since 100% of employees will be eligible for the program, the Project can get a maximum VMT reduction of up to ***4.00%.***

Based on the above, after the Project implements the combination mitigation measures of T-7 and T-8, the VMT reduction is:

$$1 - [(1 - 4\%) * (1 - 4\%)] = \mathbf{7.84}\%$$

It should be noted that the above recommended mitigations measures will completely offset the Project's baseline and cumulative VMT impacts for the office and retail land uses as detailed above.

CONCLUSION

Based on the *County of Riverside Transportation Analysis Guidelines for Level of Service, Vehicle Miles Traveled (Dated December 2020)* and the VMT methodology, criteria, analysis, thresholds and results outlined in this Technical Memorandum, the proposed Project will not have a significant VMT impact after implementing the recommended VMT mitigation measures outlined in this memorandum.

EXECUTIVE SUMMARY

Project Description

- The KPC Coachella Specific Plan area is generally located on the north side of the I-10 Freeway in the City of Coachella, Riverside County, California. The proposed Project consists of a mixed-use master plan with approximately 9,538 residential units, a 50-acre casino and hotel entertainment district including a performing arts center, 220 acres of mixed-use development, 71 acres of educational uses, and 1,170 acres of open space and parks on approximately 2,700 acres.

- The KPC Coachella Specific Plan will include a broad range of land uses including residential, commercial, entertainment, schools, parks, other public facilities, and open space. The Specific Plan will be made up of five villages, further divided into planning areas. The Project land uses are anticipated to be completed by Buildout Year 2045. Primary access for the Project site will be provided via the proposed Avenue 50 and I-10 Interchange as well as an extension of the Vista Del Norte road from the west. Based on the planning area layout and the internal roadway network of the Specific Plan, twenty-five (25) Project Traffic Analysis Zones (TAZ) were developed as part of the traffic model forecasting process.

- The roadway system is comprised of a hierarchy of roadways that include arterial, major, and secondary roadways that effectively and efficiently allow for vehicular movement within the Specific Plan area and its connections to the I-10 Freeway and the Vista Del Norte road.

- Utilizing the Riverside County Model (RIVCOM), as provided by Western Riverside Council of Governments (WRCOG), the proposed Project is forecast to generate approximately 98,485 gross daily trips, with 8,964 gross trips (4,047 inbound, 4,917 outbound) produced in the AM peak hour and 8,127 gross trips (4,309 inbound, 3,818 outbound) produced in the PM peak hour on a "typical" weekday. Further, the proposed Project is forecast to generate approximately 58,091 daily net external trips, with 5,350 net external trips (2,246 inbound, 3,105 outbound) produced in the AM peak hour and 4,738 net external trips (2,614 inbound, 2,125 outbound) produced in the PM peak hour on a "typical" weekday.

Study Area

- Fifty-three (53) existing key study intersections and two (2) future key study intersections were designated for evaluation for the External Network analysis.

- Five (5) future key study intersections were designated for evaluation for the Internal Network analysis.

External Network Traffic Impact Analysis

External Network Existing Traffic Conditions

- For the Existing traffic conditions, two (2) of the key study intersections currently operate at an unacceptable level of service during the AM and/or PM peak hour based on the HCM method of analysis and the LOS criteria mentioned in this report. The remaining key study intersections currently operate at an acceptable level of service during the AM and PM peak hours.

Year 2045 With Project Traffic Conditions

- For the Year 2045 With Project traffic conditions, twenty (20) of the key study intersections are forecast to operate at unacceptable levels of service with the addition of Project traffic based on the LOS impact criteria mentioned in this report. The remaining thirty-five (35) key study intersections operate at acceptable levels of service during the AM and PM peak hours under the External Network Year 2045 With Project traffic conditions. These twenty (20) will operate at adverse levels of service when compared to the LOS criteria detailed in this report. The implementation of recommended improvements at the deficient locations improves these intersections to acceptable services levels.

Internal Network Traffic Impact Analysis

Project Capacity Analysis

- For the Project traffic conditions, all five (5) Project key study intersections are forecast to operate at acceptable level of service LOS D or better during the AM and PM peak hours and will not have an impact under the Internal Network Project traffic conditions when compared to the LOS criteria defined in this report.

Traffic Signal Warrant Analyses

External Network Year 2045 With Project Traffic Conditions

- For the Year 2045 With Project traffic conditions, the results indicate that the following twelve (12) key unsignalized intersections have future traffic conditions that would exceed the volume thresholds of Warrant #3, Part A and Part B for the AM and PM peak hours:
  - 9. Jackson Street at Avenue 50
  - 10. Jackson Street at Avenue 52
  - 19. Calhoun Street at Avenue 52
  - 36. Dillon Road at Vista Del Norte
  - 37. Dillon Road at I-10 Westbound Ramps

- 38. Dillon Road at I-10 Eastbound Ramps
- 40. Magnolia Street/Tyler Street at Avenue 50
- 46. Tyler Street at 50th Avenue
- 49. Polk Street at 50th Avenue
- 50. Polk Street at Avenue 52
- 52. Fillmore Street at Avenue 50
- 53. Fillmore Street at Avenue 52

The analysis and the recommended improvements show that the above-mentioned twelve (12) intersections under the Year 2045 With Project traffic conditions are recommended to be signalized. With signalization of these twelve (12) intersections, which are warranted, these intersections are forecast to operate at acceptable service levels during the AM and PM peak hours.

Fair Share Analysis

External Network Year 2045 With Project Traffic Conditions

- The AM and/or PM peak hours Project fair share percentages at the key study intersections that are forecast to operate at adverse levels of service under Year 2045 with Project traffic conditions range from **-7.13%** to **+50.35**%.

Caltrans Off-Ramp Vehicle Queuing Analysis

Year 2045 With Project Traffic Conditions

- Adequate storage is provided to accommodate the forecast 95th percentile queues under Year 2045 With Project traffic conditions at the six (6) off-ramp locations where the proposed Project is expected to generate new Project trips, which includes the planned construction of the Monroe Street Interchange Project and the Avenue 50 Interchange Project. The Project is expected to neither cause nor contribute towards vehicle queuing which extends back into the I-10 Freeway mainline travel lanes for Year 2045 With Project traffic conditions. Therefore, the proposed Project is not anticipated to negatively influence safety on the State Highway System.

Vehicle Miles Traveled (VMT) Analysis

- LLG has prepared the approved *Vehicle Miles Traveled (VMT) Analysis for the Proposed KPC Coachella Specific Plan Technical Memorandum,* dated December 8, 2022, which summarizes the County of Riverside VMT screening criteria, analysis methodology, VMT impact thresholds, VMT analysis, and conclusion for the KPC Coachella Specific Plan.

- As noted within the technical memorandum, when project VMT exceeds the threshold(s) of significance, the project will need to mitigate its CEQA transportation impact. The type and size of the project will determine the most appropriate mitigation strategies for VMT impacts. The recommended mitigation measures for the proposed Project's office land use consists of:

  - T-7. Implement Commute Trip Reduction Marketing
  - T-8. Providing Ridesharing Program

  It should be noted that the above recommended mitigations measures will completely offset the Project's baseline and cumulative VMT impacts for the office and retail land uses.

TRAFFIC IMPACT ANALYSIS REPORT

KPC COACHELLA SPECIFIC PLAN

Coachella, California

November 8, 2023

(Revision of the February 24, 2023 Report)

1.0 INTRODUCTION

This traffic impact analysis evaluates the potential traffic impacts of the proposed KPC Coachella Specific Plan (hereinafter referred to as Project) on the area traffic circulation system. The proposed Project consists of a mixed-use master plan with 9,538 residential units, a 50-acre casino and hotel entertainment district including a performing arts center, 220 acres of mixed-use development, 71 acres of educational uses, and 1,170 acres of open space and parks on approximately 2,700 acres. The KPC Coachella Specific Plan area is generally located on the north side of the I-10 Freeway in the City of Coachella, Riverside County, California.

Accordingly, the Project will include a broad range of land uses including residential, commercial, entertainment, schools, parks, other public facilities, and open space. The Specific Plan will be made up of five villages, further divided into planning areas. The Project land uses are anticipated to be completed by Buildout Year 2045. Primary access for the Project site will be provided via the proposed Avenue 50 and I-10 Interchange as well as an extension of the Vista Del Norte road from the west.

This traffic report analyzes Existing and Year 2045 AM and PM peak hours, as well as internal (on-site) traffic conditions upon completion of the Project. The primary purpose of this traffic impact analysis (TIA) report is to provide a program-level analysis for the Year 2045 traffic conditions and identify recommended traffic improvements, accordingly, to achieve acceptable service levels within the study area. In addition, for the purposes of determining the extent and timing of phased infrastructure roadway improvements, subsequent TIA's will be prepared to accompany any application requiring discretionary action (i.e. Tentative Tract Map or Conditional Use Permit, etc.). The TIA will be prepared for the strict purpose of determining the "nexus" improvements required as a part of the respective application. ***Appendix A*** contains a copy of the Approved Traffic Impact Study Scoping Agreement.

1.1 Study Area

The Level of Service (LOS) analysis at the following key internal and external locations were used to evaluate the potential traffic-related impacts associated with future traffic and the proposed Project. When necessary, this report recommends intersection improvements that may be required to accommodate future traffic volumes and restore/maintain an acceptable Level of Service, and/or mitigates the impact of the Project.

1.1.1 *Internal Network Study Area*

Five (5) key study intersections were designated for evaluation for the Internal Network analysis. The key area study intersections selected for evaluation in the Internal Network provide internal access to the study area and are listed as follows:

1. Internal Intersection 1
2. Internal Intersection 2
3. Internal Intersection 3
4. Internal Intersection 4
5. Internal Intersection 5

Figure 1-1 presents the Internal Network Vicinity Map, which illustrates the Project study locations and street system.

1.1.2 *External Network Study Area*

Fifty-three (53) existing key study intersections and two (2) future key study intersection were designated for evaluation for the External Network analysis. The key area study intersections selected for evaluation for the External Network provide local and regional access to the study area and are listed as follows:

1. Monroe Street at I-10 Westbound Ramps
2. Monroe Street at I-10 Eastbound Ramps
3. Monroe Street at Highway 111
4. Monroe Street at Avenue 48
5. Jackson Street at I-10 Westbound Ramps
6. Jackson Street at I-10 Eastbound Ramps
7. Jackson Street at Highway 111
8. Jackson Street at Avenue 48
9. Jackson Street at Avenue 50
10. Jackson Street at Avenue 52
11. Golf Center Parkway at Avenue 44
12. Golf Center Parkway at Indio Springs Drive
13. Golf Center Parkway at I-10 Westbound Ramps
14. Golf Center Parkway at I-10 Eastbound Ramps
15. Golf Center Parkway at Avenue 45
16. Golf Center Parkway/Lorraine Street at Highway 111
17. Calhoun Street at Avenue 48
18. Calhoun Street at Avenue 50
19. Calhoun Street at Avenue 52

20. Van Buren Street at Avenue 48
21. Van Buren Street at Avenue 50
22. Van Buren Street at Avenue 52
23. Dillon Road at Avenue 48
24. Highway 111 at Avenue 48
25. Dillon Road at Cabazon Avenue/Avenue 48
26. Grapefruit Boulevard at Avenue 49
27. Dillon Road at Harrison Place
28. Dillon Road at SR-86 NB Ramps
29. Dillon Road at SR-86 SB Ramps
30. Cesar Chavez Street at Park Lane/Grapefruit Boulevard
31. Cesar Chavez Street at Avenue 50
32. Cesar Chavez Street at Avenue 52
33. Leoco Lane at Avenue 50
34. Grapefruit Boulevard at Leoco Lane
35. Terra Lago Parkway at Avenue 44
36. Dillon Road at Vista Del Norte
37. Dillon Road at I-10 Westbound Ramps
38. Dillon Road at I-10 Eastbound Ramps
39. Dillon Road at Vista Del Sur
40. Magnolia Street/Tyler Street at Avenue 50
41. Sunset Drive at Avenue 52
42. Grapefruit Boulevard at Sunset Drive
43. Dillon Road at Fargo Canyon Road
44. Dillon Road at Avenue 44
45. Tyler Street at Vista Del Norte
46. Tyler Street at 50th Avenue
47. Tyler Street at SR-86
48. Tyler Street at Avenue 52/Industrial Way
49. Polk Street at 50th Avenue
50. Polk Street at Avenue 52
51. SR-86 at Avenue 52
52. Fillmore Street at Avenue 50
53. Fillmore Street at Avenue 52
54. Avenue 50 at I-10 Westbound Ramps *[Future Intersection]*

55. Avenue 50 at I-10 Eastbound Ramps *[Future Intersection]*

Figure 1-2 present the External Network Vicinity Map, which illustrates the general location of the Project, surrounding cities and the regional freeway system.

1.2 Traffic Impact Analysis Components

The *Highway Capacity Manual (HCM) Delay* and corresponding *Level of Service (LOS)* calculations at the key study locations were used to evaluate the potential traffic-related impacts associated with existing, future, and the Project traffic. When necessary, this report recommends intersection improvements that may be required to accommodate future traffic volumes and restore/maintain an acceptable Level of Service.

Included in this Traffic Impact Analysis are:

- Existing Traffic Counts,
- Estimated Project traffic generation,
- AM and PM peak hour capacity analyses for Existing Traffic Conditions,
- AM and PM peak hour capacity analyses for Year 2045, without and with Project Traffic Conditions,
- AM and PM peak hour capacity analyses for Project (Internal Network only) Traffic Conditions,
- Area-Wide Traffic Improvements,
- Traffic Signal Warrant Analysis,
- Project Fair Share Analysis, and
- Caltrans Facilities Analysis.

1.3 Traffic Impact Analysis Scenarios

AM and PM peak hour intersection capacity analyses for the key study intersections have been conducted for the following traffic impact analysis scenarios:

1. Existing Traffic Conditions,
2. Year 2045 Without Project Traffic Conditions,
3. Year 2045 With Project Traffic Conditions, and
4. Scenario (3) With Mitigation, if any.

The peak hour Delay/LOS calculations are based on the *Highway Capacity Manual 7* (HCM 7) methodology for signalized and unsignalized intersections and will be consistent with the City of Coachella, County of Riverside and Caltrans capacity analysis methodology. The Project's potential impact will be based on the appropriate jurisdiction impact criteria.

1.4 Impact Criteria and Thresholds

City of Coachella

According to the City of Coachella General Plan, the following citywide target Levels of Service shall be maintained:

- LOS D is the maximum acceptable level of service.

City of Indio

According to the City of Indio General Plan, the following countywide target Levels of Service shall be maintained:

- LOS D is the maximum acceptable level of service.

County of Riverside

According to the County of Riverside General Plan, the following countywide target Levels of Service shall be maintained:

- LOS C shall apply to all development proposals in any area of the Riverside County not located within the boundaries of an Area Plan, as well as those areas located within the following Area Plans: REMAP, Eastern Coachella Valley, Desert Center, Palo Verde Valley, and those non-Community Development areas of the Elsinore, Lake Mathews/Woodcrest, Mead Valley and Temescal Canyon Area Plans.
- LOS D shall apply to all development proposals located within any of the following Area Plans: Eastvale, Jurupa, Highgrove, Reche Canyon/Badlands, Lakeview/Nuevo, Sun City/Menifee Valley, Harvest Valley/Winchester, Southwest Area, The Pass, San Jacinto Valley, Western Coachella Valley and those Community Development Areas of the Elsinore, Lake Mathews/Woodcrest, Mead Valley and Temescal Canyon Area Plans.
- LOS E may be allowed by the Board of Supervisors within designated areas where transit-oriented development and walkable communities are proposed.

Caltrans

Caltrans "endeavors to maintain a target LOS at the transition between LOS "C" and LOS "D" on State highway facilities"; it does not require that LOS "D" (shall) be maintained. However, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. For this analysis, LOS D is the target level of service standard and will be utilized to assess the Project impacts at the state-controlled study intersections, consistent with City of Coachella and City of Indio requirements.

Based on the abovementioned level of service impact criteria, LOS D is the minimum acceptable LOS at fifty-four (54) external network key study intersections and all five (5) internal network key study intersections under the jurisdiction of the Cities of Indio and Coachella, which are located in the Western Coachella Valley Area Plan. Please note that although the City of Coachella is located in the Eastern Coachella Valley Area Plan, the City guidelines maintain LOS D as its maximum acceptable level of service. LOS C is the minimum acceptable LOS at one (1) external key study

intersections located in the Eastern Coachella Valley Area Plan and under the jurisdiction of Riverside County.

TABLE 1-1

LEVEL OF SERVICE CRITERIA FOR SIGNALIZED INTERSECTIONS (HCM 7 METHODOLOGY)[1]

Level of Service (LOS)	Control Delay Per Vehicle (seconds/vehicle)	Level of Service Description
A	$\leq$ 10.0	This level of service occurs when progression is extremely favorable and most vehicles arrive during the green phase. Most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.
B	> 10.0 and $\leq$ 20.0	This level generally occurs with good progression, short cycle lengths, or both. More vehicles stop than with LOS A, causing higher levels of average delay.
C	> 20.0 and $\leq$ 35.0	Average traffic delays. These higher delays may result from fair progression, longer cycle lengths, or both. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant at this level, though many still pass through the intersection without stopping.
D	> 35.0 and $\leq$ 55.0	Long traffic delays At level D, the influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high *v/c* ratios. Many vehicles stop and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.
E	> 55.0 and $\leq$ 80.0	Very long traffic delays This level is considered by many agencies to be the limit of acceptable delay. These high delay values generally indicate poor progression, long cycle lengths and high *v/c* ratios. Individual cycle failures are frequent occurrences.
F	$\geq$ 80.0	Severe congestion This level, considered to be unacceptable to most drivers, often occurs with over saturation, that is, when arrival flow rates exceed the capacity of the intersection. It may also occur at high *v/c* ratios below 1.0 with many individual cycle failures. Poor progression and long cycle lengths may also be major contributing factors to such delay levels.

TABLE 1-2

LEVEL OF SERVICE CRITERIA FOR UNSIGNALIZED INTERSECTIONS (HCM 7 METHODOLOGY)[2,3]

Level of Service (LOS)	Highway Capacity Manual (HCM) Delay Per Vehicle (seconds/vehicle)	Level of Service Description
A	≤ 10.0	Little or no delay
B	> 10.0 and ≤ 15.0	Short traffic delays
C	> 15.0 and ≤ 25.0	Average traffic delays
D	> 25.0 and ≤ 35.0	Long traffic delays
E	> 35.0 and ≤ 50.0	Very long traffic delays
F	> 50.0	Severe congestion

[2] Source: *Highway Capacity Manual 7*, Chapter 20: Two-Way Stop-Controlled Intersections. The LOS criteria apply to each lane on a given approach and to each approach on the minor street. LOS is not calculated for major-street approaches or for the intersection as a whole.

[3] Source: *Highway Capacity Manual 7*, Chapter 21: All-Way Stop-Controlled Intersections. For approaches and intersection-wide assessment, LOS is defined solely by control delay.

2.0 PROJECT DESCRIPTION AND LOCATION

The KPC Coachella Specific Plan area is generally located on the north side of the I-10 Freeway in the City of Coachella, Riverside County, California. The Project applicant is proposing a Specific Plan for the development of various mixed-uses on approximately 2,700 acres of land. The KPC Coachella Specific Plan area has been organized into Villages and Planning Areas. There are a total of five Villages. The Project land uses are anticipated to be completed by Buildout Year 2045. Primary access for the Project site will be provided via the proposed Avenue 50 and I-10 Interchange as well as an extension of the Vista Del Norte road from the west. ***Figure 2-1*** presents an existing aerial site plan of the Project site and shows the Project site in relationship to the I-10 Freeway. ***Figure 2-2*** presents the proposed Project land use plan.

The Project would develop approximately: 9,538 residential units, a 50-acre casino and hotel entertainment district including a performing arts center, 220 acres of mixed-use development, 71 acres of educational uses, and 1,170 acres of open space and parks. Public services, utilities and other amenities are also planned for the community. ***Tables 2-1*** through ***2-6*** present the land use breakdown by Village.

2.1 Land Use Plan

The KPC Coachella Specific Plan area has been organized into Villages. Each Village is divided into smaller Planning Areas. Each Village has been organized based on location, vision, and land use intensity. ***Figure 2-3*** shows the locations of each village within the Specific Plan area.

2.2 Internal Roadway Network

The roadway system is comprised of a hierarchy of roadways that include arterial, major, and secondary roadways that effectively and efficiently allow for vehicular movement within the Specific Plan area and its connections to the I-10 Freeway and the Vista Del Norte road. ***Figure 2-4*** presented the proposed circulation plan of the Project site.

Regional circulation will be provided by the new Avenue 50 Interchange and the extension of Avenue 50 into the site. Avenue 50 within the Project is planned as a six-lane divided arterial with a landscaped median and off-street bike/NEV lanes. Additional site access will be provided by an extension of Vista Del Norte across the All-American Canal into the Project. The extension of Vista Del Norte is planned as a four-lane divided arterial.

Internal circulation is defined by several loop roads providing access to the various neighborhoods and planning areas of the Project. Three (3) primary backbone road types are planned: a six-lane divided major roadway and a four-lane divided major roadway, which comprises the primary loop road and westerly access connection from Vista Del Norte, and a two-lane collector roadway with center turn lane. Vista Del Norte is proposed as a four-lane major roadway with a wide median to accommodate the potential for an increase to six travel lanes. Due to the sloping topography and road curves, the two-lane collectors are designed with a center continuous turn lane to allow for turning movements in areas with potentially limited sight distance. The planned roads cross on-site

drainages through arch-culvert bridges, although the intent is to minimize disturbance to the drainage channels to be retained.

2.3 Internal Network Intersection Traffic Controls

The internal network traffic will be controlled by a combination of stop signs, roundabouts, and traffic signals. ***Figure 2-5*** presents the intersection traffic controls anticipated for the internal roadway network. As shown in *Figure 2-5,* the primary traffic control consists of four (4) roundabouts and one (1) traffic signal. The proposed reconfigured Avenue 50 and I-10 Interchange will consist of two signals at the ramp terminals.

FIGURE 2-5

INTERNAL NETWORK INTERSECTION CONTROLS

KPC COACHELLA SPECIFIC PLAN, COACHELLA

3.0 EXTERNAL NETWORK EXISTING CONDITIONS

The I-10 Freeway provides primary regional access to the proposed development site. The I-10 Freeway is located directly south of the Project site and will provide regional access to the Project via the proposed Avenue 50 and I-10 Interchange. Access will also be provided via an extension of the Vista Del Norte Road from the west.

3.1 Existing Street Network

The principal External Network of streets in the region primarily to the west and south of the Project site consists of Highway 111, Avenue 48, Dillon Road, Avenue 50, and Avenue 52. The External Network spans the Cities of Coachella and Indio as well as Riverside County. ***Figure 3-1*** presents the External Network Vicinity Map and ***Figure 3-2*** presents the External Network Intersection Controls for the key external existing study intersections.

3.2 Existing Traffic Volumes

Existing AM and PM peak hour traffic volumes at fifty-three (53) key existing study intersections located in the External Network evaluated in this report were collected in August 2022 by Counts Unlimited, Inc. ***Appendix B*** contains the detailed traffic count data. These key existing study intersections were designated for evaluation based on the appropriate City criteria and knowledge of the area circulation system.

Figures 3-3 and ***3-4*** present the existing External Network AM and PM peak hour traffic volumes, respectively, for the key existing study intersections.

3.3 Existing Intersection Level of Service Results

Table 3-1 summarizes the existing peak hour service level calculations for key study intersections based on existing traffic volumes and current street geometry. Review of *Table 3-1* indicates that based on the HCM method of analysis and the LOS criteria mentioned in this report, two (2) of the key study intersections currently operate at an unacceptable level of service, LOS E or worse during the AM and/or PM peak hour. The remaining key study intersections currently operate at an acceptable level of service during the AM and PM peak hours. The intersections operating at an adverse level of service are:

	AM Peak Hour		PM Peak Hour	
Key Intersection	**Delay (s/v)**	**LOS**	**Delay (s/v)**	**LOS**
9. Jackson Street at Avenue 50	38.9	E	--	--
16. Golf Center Parkway/Lorraine Street at Highway 111	--	--	181.2	F

Appendix C contains the Existing Traffic Conditions Delay/LOS calculation worksheets for key study intersections.

TABLE 3-1

4.0 TRAFFIC FORECASTING METHODOLOGY

The traffic forecasting methodology for the proposed KPC Coachella Specific Plan has been developed utilizing the Riverside County Model (RIVCOM), as provided by Western Riverside Council of Governments (WRCOG), consistent with the requirements outlined in the *County of Riverside Transportation Analysis Guidelines for Level of Service and Vehicle Miles Traveled (December 2020).* It should be noted that the La Entrada Specific Plan, which is located adjacent southerly to the KPC Specific Plan site, is included in RIVCOM. .Specifically as part of the Buildout year 2045 forecasting methodology, appropriate socio-economic data (SED) data was allocated to the RIVCOM Traffic Analysis Zones (TAZ's) based on the Project description, which is reflected in *Tables 2-1* to *2-6*, for the with Project scenarios. Riverside County FAR conversion factors that are allocated for the region have been utilized to develop SED data for the Project. Furthermore, county rates have also been used for converting square feet to employment for updating the SED data within the specific plan TAZ's.

5.0 PROJECT TRIP CHARACTERISTICS

5.1 Project Trip Generation Forecast

Trip generation is expressed in vehicle trip ends, defined as one-way vehicular movements, either entering or exiting the generating land use. The KPC Coachella Specific Plan traffic has been developed using the Riverside County Model (RIVCOM), provided by Western Riverside Council of Governments (WRCOG), as described above in *Section 4.0.*

Table 5-1 shows the Project trip generation forecast as reflected in RIVCOM.

Review of ***Table 5-1*** indicates the total proposed Project is forecast to generate approximately 98,485 gross daily trips, with 8,964 gross trips (4,047 inbound, 4,917 outbound) produced in the AM peak hour and 8,127 gross trips (4,309 inbound, 3,818 outbound) produced in the PM peak hour on a "typical" weekday.

Further, the proposed Project is forecast to generate approximately 58,091 daily net external trips, with 5,350 net external trips (2,246 inbound, 3,105 outbound) produced in the AM peak hour and 4,738 net external trips (2,614 inbound, 2,125 outbound) produced in the PM peak hour on a "typical" weekday.

5.2 Internal Network Project Traffic Volumes

The anticipated AM and PM peak hour Project traffic volumes at the five (5) Project study intersections located within the Internal Network are presented in ***Figures 5-1*** and ***5-2***, respectively.

TABLE 5-1[9]

PROJECT TRIP GENERATION FORECAST – BUILDOUT KPC COACHELLA SPECIFIC PLAN

Project Description	Daily 2-Way	AM Peak Hour			PM Peak Hour		
		Enter	Exit	Total	Enter	Exit	Total
KPC Coachella Specific Plan Total Gross Trip Generation	**98,485**	**4,047**	**4,917**	**8,964**	**4,309**	**3,818**	**8,127**
Total Internal Trip Ends	**40,394**	**1,801**	**1,813**	**3,614**	**1,695**	**1,693**	**3,389**
Total External Trip Ends	**58,091**	**2,246**	**3,105**	**5,350**	**2,614**	**2,125**	**4,738**

6.0 FUTURE TRAFFIC CONDITIONS

6.1 Travel Demand Model Methodology

Traffic volume forecasts for the External Network were obtained through utilization of the most current version of the Riverside County Model (RIVCOM), which is a sub-area model created from the Southern California Association of Governments (SCAG) Regional Transportation Plan (RTP) model, administered by LLG. The base year of the model is 2018 and the future Buildout year is 2045.

LLG modified the model to develop the Year 2018 and Year 2045 with the proposed Project. Twenty-five (25) Traffic Analysis Zones (TAZ) were created to represent the Project planning areas (some of which has been combined based on trip characteristics). Additionally, both the unmodified base and future year model networks do not include the roadway network within the Project site. The model networks were updated with the internal roadway network to reflect appropriate assignment of traffic on to the local streets from new Project TAZs. Modifications to the roadway network also helped achieve more accurate traffic distribution and assignment within the Project vicinity.

Based on the Project description, appropriate Socio-Economic Data (SED) was allocated to the newly created RIVCOM TAZs for the Project. SED was developed using conversion factor from RIVCOM SED data analysis. Additionally, County rates were used for converting square feet to employment for updating the SED where applicable.

Finally, the base and future year data was utilized to obtain the AM and PM peak period directional link volumes that were used to develop forecast year traffic volumes for the external intersections. The model volumes were post-processed using County approved methodologies and forecast turning volumes have been developed using NCHRP-255 methodologies. The internal and external roadway networks change between Existing, Year 2045 Without Project and Year 2045 With Project traffic conditions, resulting in noticeable volume differences between the Existing and Buildout horizon years.

6.1.1 *Volume Adjustment*

Using the Riverside County Model (RIVCOM), projected traffic volumes were obtained for each intersection. The model produces peak period and off-peak period volumes. Before converting the model peak period link volumes to future turning movement volumes for analysis, the model volumes must be reviewed and adjusted.

The first step is to obtain the approach and departure volumes from the model for each leg of the analyzed intersections. The next step converts the model approach and departure volumes from AM and PM peak period volumes to peak hour volumes. The AM peak hour volumes are calculated by multiplying the AM peak period volumes by 38%. Similarly, the PM peak hour volumes are calculated by multiplying the PM period volumes by 28%. These are the percentages of vehicles that are assumed to occur in the peak hour of the peak period. These factors are derived from SCAG research. The next step is to determine the difference between the base year peak hour model

volumes and the future peak hour model volumes. This "difference" represents the projected growth in traffic on each approach to Year 2045 using the RIVCOM model.

6.1.2 *B-Turn Methodology*

The base year turning movement counts for each intersection must be converted to approach and departure volumes for each leg of the intersection. Once the base counts are in this format, the difference between the future model and base model are then added to the base year counts for each corresponding approach and departure volume. This step provides the adjusted volumes that will be used to determine the Buildout turning movement volumes. The next process in the forecasting of future turning volumes applies the B-turn methodology. The B-turn methodology is generally described in the *"National Cooperative Highway Research Program Report (NCHRP) 255: Highway Traffic Data for Urbanized Area Project Planning and Design", Chapter 8*. The B-turn method uses the base year turning percentages (from traffic counts) and proceeds through an iterative computational technique to produce a final set of future year turning volumes. The computations involve alternatively balancing the rows (approaches) and the columns (departures) of a turning movement matrix until an acceptable convergence is obtained. Future year link volumes are fixed using this method and the turning movements are adjusted to match. The results must be checked for reasonableness, and manual adjustments are sometimes necessary.

Finally, it should be noted that all provided volumes are from a Countywide General Plan level model that was not specifically developed for analysis of individual intersection turning movements. Therefore, each projected volume was reviewed carefully and adjustments were applied as warranted based on local conditions and professional engineering judgment.

The External Network traffic model post-processing worksheets are contained in ***Appendix D***. Please note that the post-processing methodology utilized in this technical memorandum is consistent with SCAG requirements.

6.2 External Network Year 2045 Without Project Traffic Volumes

The External Network Year 2045 Without Project traffic volumes were obtained by post-processing the peak hour approach and departure traffic volumes based on the relationship of the base year validation model run output to the base year ground traffic counts and represent the External Network Year 2045 Without Project traffic conditions.

Figure 6-1 presents the External Network Vicinity Map. ***Figures 6-2*** and ***6-3*** present the External Network Year 2045 Without Project Traffic Conditions AM and PM peak hour traffic volumes at the fifty-five (55) external network key study intersections, respectively.

6.3 External Network Year 2045 With Project Traffic Volumes

The External Network Year 2045 With Project traffic volumes were obtained by post-processing the peak hour approach and departure traffic volumes based on the relationship of the base year validation model run output to the base year ground traffic counts and represent the External Network Year 2045 With Project traffic conditions.

Figures 6-4 and ***6-5*** present the AM and PM peak hour External Network Year 2045 With Project traffic volumes, respectively, at the fifty-five (55) external network key study intersections.

7.0 EXTERNAL NETWORK YEAR 2045 TRAFFIC IMPACT ANALYSIS

The relative impact of the added Project traffic volumes generated by the proposed Project during the AM and PM peak hours was evaluated based on analysis of future operating conditions at the key study intersections in the External Network, with and without, the proposed Project for the Year 2045 traffic conditions. The previously discussed capacity analysis procedures were utilized to investigate the future delay relationships and volume to capacity ratios and service level characteristics at each study intersection. The significance of the potential impacts of the Project at each key intersection was then evaluated using the traffic impact criteria mentioned in this report.

Table 7-1 summarizes the AM and PM peak hour Level of Service results at the key study intersections for the Year 2045 traffic conditions. The first column (1) of Delay/LOS values in *Table 7-1* presents a summary of existing AM and PM peak hour traffic conditions (which were also presented in *Table 3-1*). The second column (2) lists forecast Year 2045 Without Project traffic conditions based on future intersection geometry and planned improvements. The third column (3) lists forecast Year 2045 With Project traffic conditions. The fourth column (4) indicates whether the traffic associated with the Year 2045 With Project traffic conditions will have an adverse impact based on the impact criteria mentioned in this report. The fifth column (5) presents the resultant level of service with the inclusion of recommended improvements to achieve an acceptable level of service.

7.1 External Network Year 2045 Without Project Traffic Conditions

Fifty-five (55) key study intersections were analyzed for the External Network Year 2045 Without Project traffic conditions. Review of column (2) of *Table 7-1* shows that eighteen (18) key study intersections are forecast to operate at unacceptable levels of service during the AM and/or PM peak hours under External Network Year 2045 Without Project traffic conditions. The remaining thirty-seven (37) key study intersections operate at acceptable levels of service better during the AM and PM peak hours. The intersections operating at adverse levels of service are:

	AM Peak Hour		PM Peak Hour	
Key Intersection	**Delay (s/v)**	**LOS**	**Delay (s/v)**	**LOS**
9. Jackson Street at Avenue 50	143.1	F	81.9	F
10. Jackson Street at Avenue 52	102.9	F	103.9	F
16. Golf Center Parkway/Lorraine Street at Highway 111	314.9	F	484.2	F
19. Calhoun Street at Avenue 52	277.8	F	129.8	F
22. Van Buren Street at Avenue 52	99.7	F	--	--
32. Cesar Chavez Street at Avenue 52	118.0	--	107.7	F

40. Magnolia Street/Tyler Street at Avenue 50	465.2	F	455.0	F

46. Tyler Street at 50th Avenue	2,838.5	F	241.5	F
47. Tyler Street at SR-86	335.0	F	273.3	F
49. Polk Street at 50th Avenue	274.5	F	--	--
50. Polk Street at Avenue 52	159.1	F	98.0	F
51. SR-86 at Avenue 52	318.7	F	221.8	F
52. Fillmore Street at Avenue 50	1,192.7	F	95.8	F
53. Fillmore Street at Avenue 52	3,590.1	F	2,439.3	F

7.2 External Network Year 2045 With Project Traffic Conditions

Fifty-five (55) key study intersections were analyzed for the External Network Year 2045 With Project traffic conditions. Review of column (3) of *Table 7-1* shows that twenty (20) of the key study intersections are forecast to operate at unacceptable levels of service with the addition of Project traffic based on the LOS impact criteria mentioned in this report. The remaining thirty-five (35) key study intersections operate at acceptable levels of service during the AM and PM peak hours under the External Network Year 2045 With Project traffic conditions. The intersections operating at adverse LOS are listed below:

	AM Peak Hour		**PM Peak Hour**	
Key Intersection	**Delay (s/v)**	**LOS**	**Delay (s/v)**	**LOS**
9. Jackson Street at Avenue 50	133.5	F	73.7	F
10. Jackson Street at Avenue 52	107.6	F	97.5	F
13. Golf Center Parkway at I-10 WB Ramps	77.9	E	--	--
14. Golf Center Parkway at I-10 EB Ramps	--	--	63.3	E
16. Golf Center Parkway/Lorraine Street at Highway 111	324.9	F	474.6	F
19. Calhoun Street at Avenue 52	273.7	F	125.0	F
22. Van Buren Street at Avenue 52	96.5	F	--	--
32. Cesar Chavez Street at Avenue 52	129.7	F	120.6	F
34. Grapefruit Boulevard at Leoco Lane	--	--	42.7	E
36. Dillon Road at Vista Del Norte	4,970.1	F	3,369.5	F
37. Dillon Road at I-10 WB Ramps	2,204.8	F	1,163.8	F
38. Dillon Road at I-10 EB Ramps	1,035.3	F	1,026.3	F
40. Magnolia Street/Tyler Street at Avenue 50	530.8	F	479.2	F
46. Tyler Street at 50th Avenue	2,171.6	F	353.2	F
47. Tyler Street at SR-86	354.6	F	292.0	F
49. Polk Street at 50th Avenue	10,000.0	F	10,000.0	F
50. Polk Street at Avenue 52	987.9	F	1,845.8	F
51. SR-86 at Avenue 52	436.2	F	340.4	F
52. Fillmore Street at Avenue 50	10,000.0	F	10,000.0	F
53. Fillmore Street at Avenue 52	6,050.9	F	4,788.0	F

Review of column (4) indicates that these twenty (20) intersections will operate at adverse levels of service when compared to the LOS criteria detailed in this report. However, as shown in column (5) of *Table 9-1,* the implementation of recommended improvements at the deficient locations improves these intersections to acceptable services levels.

Appendix E contains the Year 2045 With and Without Project Traffic Conditions Delay/LOS calculation worksheets for the key study intersections.

TABLE 7-1

8.0 INTERNAL NETWORK TRAFFIC IMPACT ANALYSIS

The relative impact of the Project traffic volumes generated by the proposed Project during the AM and PM peak hours was evaluated based on analysis of future operating conditions at the key study intersections in the Internal Network with the proposed Project traffic conditions. The previously discussed capacity analysis procedures were utilized to investigate the future delay relationships and volume to capacity ratios and service level characteristics at each study intersection and roadway segment. The levels of service at each key intersection was then evaluated using the traffic impact criteria mentioned in this report.

8.1 Internal Network Project Intersection Capacity Analysis

Table 8-1 summarizes the AM and PM peak hour Level of Service and Delay results at the key study intersections of the Internal Network Project traffic conditions. Review of *Table 8-1* indicates that based on the HCM method of analysis and the LOS criteria mentioned in this report, all five (5) Project key study intersections are forecast to operate at acceptable level of service LOS D or better during the AM and PM peak hours under the Internal Network Project traffic conditions when compared to the LOS criteria defined in this report.

Appendix F presents the Internal Network Project Traffic Conditions Delay/LOS calculations worksheets for the internal network key study intersections.

TABLE 8-1

INTERNAL NETWORK PROJECT INTERSECTION PEAK HOUR LEVELS OF SERVICE SUMMARY[17]

Key Intersection	Maximum Acceptable LOS	Time Period	(1) Project Traffic Conditions		
			Control Type	Delay (s/v)	LOS
1. Internal Intersection 1	D	AM	Roundabout	13.4	B
		PM		9.3	A
2. Internal Intersection 2	D	AM	8Ø Traffic	37.9	D
		PM	Signal	44.9	D
3. Internal Intersection 3	D	AM	Roundabout	9.1	A

		PM		7.0	A
5. Internal Intersection 5	D	AM	Roundabout	3.9	A
		PM		3.8	A

Notes:

- s/v = seconds per vehicle, Ø = Phase
- LOS = Level of Service, please refer to *Tables 1-1* and *1-2* for the LOS definitions.
- **Bold LOS values** indicate adverse service levels based on the LOS standards outlined in this report.

[17] *Appendix F* contains the Delay/LOS calculation worksheets for all study intersections.

9.0 PLANNED AND RECOMMENDED IMPROVEMENTS

For those intersections where projected traffic volumes are expected to result in unacceptable operating conditions, this report recommends traffic improvements that change the intersection and/or roadway segments geometry to increase capacity. These capacity improvements involve traffic signals, roadway widening, and/or re-striping to reconfigure (add lanes) roadways to specific approaches of a key intersection. The constructability of the planned and recommended improvements is determined to be feasible based on our review of existing conditions. The identified improvements are expected to:

- Address the impact of existing traffic, Project traffic and future non-Project traffic, and
- Improve Levels of Service to an acceptable range and/or to pre-Project conditions.

9.1 External Network Planned Improvements

The following planned improvements listed below have been included in the background of Year 2045 Without Project and Year 2045 With Project traffic conditions:

- 1. Monroe Street at I-10 Westbound Ramps: Reconstruct the south leg to provide with a second exclusive northbound left-turn lane, a second northbound through lane, and a second southbound departure lane. Reconstruct the north leg to provide a second southbound through lane. Reconstruct the east leg to provide an exclusive westbound left-turn lane, a shared westbound left-turn/through/right-turn lane, and an exclusive westbound right-turn lane. Reconstruct the west leg to provide a second westbound departure lane. Stripe a crosswalk on the east leg. Modify the existing traffic signal.
- 2. Monroe Street at I-10 Eastbound Ramps: Reconstruct the south leg to provide the northbound approach with a second northbound through lane, an exclusive northbound right-turn lane, and a second southbound departure lane. Reconstruct the north leg to provide a second exclusive southbound left-turn lane, a second southbound through lane, and a second northbound departure lane. Reconstruct the west leg to provide an exclusive eastbound left-turn lane, a shared eastbound left-turn/through/right-turn lane, and an exclusive eastbound right-turn lane. Reconstruct the east leg to provide a second eastbound departure lane. Stripe a crosswalk on the east leg. Modify the existing traffic signal.
- 54. Avenue 50 at I-10 Westbound Ramps: Construct a signalized ramp interchange and design for two-phase operation. Provide the south leg with three northbound through lanes, a free northbound right-turn lane onto a loop on-ramp, and three southbound departure lanes. Provide the north leg with two southbound through lanes, a shared southbound through/right-turn lane, and three northbound departure lanes. Provide east leg with an exclusive westbound left-turn lane and exclusive westbound right-turn lane. Provide west leg on-ramp with two westbound departure lanes to I-10 freeway. Stripe crosswalks across north, west, and east legs.
- 55. Avenue 50 at I-10 Eastbound Ramps: Construct a signalized ramp interchange and design for three-phase operation. Provide the south leg with two northbound through

lanes, one shared northbound through/right-turn lane, and three southbound departure lanes. Provide the north leg with one exclusive southbound left-turn lane, three southbound through lanes, and three northbound departure lanes. Provide west leg with an exclusive eastbound left-turn lane, a shared eastbound left-turn/right-turn lane, and an exclusive eastbound right-turn lane. Provide east leg on-ramp with two eastbound departure lanes to I-10 freeway. Stripe crosswalks across south, west, and east legs.

In addition, Avenue 50 will be extended northeastward from its current terminus just east of Fillmore Street to the planned Avenue 50/I-10 interchange. This planned improvement to the existing roadway network will be constructed in conjunction with the La Entrada Specific Plan.

9.2 External Network Year 2045 With Project Recommended Improvements

The following improvements listed below have been identified to offset the effect of Year 2045 traffic and Project traffic, and improve Levels of Service to an acceptable range and/or to pre-Project conditions for Year 2045 With Project traffic conditions:

- 9. Jackson Street at Avenue 50: Install a traffic signal and design for eight-phase operation with protective left-turn phasing for all approaches. Stripe crosswalks across all four legs.
- 10. Jackson Street at Avenue 52: Install a traffic signal and design for five-phase operation with protective left-turn phasing for Avenue 52. Stripe crosswalks across all four legs.
- 13. Golf Center Parkway at I-10 Westbound Ramps: Widen and/or restripe the east leg to provide an exclusive westbound left-turn lane. Modify the existing traffic signal.
- 14. Golf Center Parkway at I-10 Eastbound Ramps: Widen and/or restripe the south leg to provide an exclusive northbound right-turn lane. Modify the existing traffic signal.
- 16. Golf Center Parkway/Lorraine Street at Highway 111: Widen and/or restripe the west leg to provide for a second exclusive eastbound left-turn lane. Widen and restripe the north leg to provide an exclusive southbound left-turn lane and a second northbound departure lane. Convert existing five-phase operation traffic signal to six-phase operation with protective left-turn phasing for eastbound and westbound traffic on Highway 111 and split-phasing on Golf Center/Lorraine Street.
- 19. Calhoun Street at Avenue 52: Install a traffic signal and design for two-phase operation. Stripe crosswalks across all four legs.
- 22. Van Buren Street at Avenue 52: Widen and restripe the east leg to provide a westbound through lane. Widen and restripe the west leg to provide a second westbound departure lane. Modify existing traffic signal.
- 32. Cesar Chavez Street at Avenue 52: Widen and restripe the west leg to provide an exclusive eastbound left-turn lane. Widen and restripe the east leg to provide an exclusive

westbound left-turn lane. Convert existing six-phase operation traffic signal to eight-phase operation with protective left-turn phasing for all approaches.

- 34. Grapefruit Boulevard at Leoco Lane: Widen and/or restripe the north leg to provide an exclusive southbound right-turn lane.
- 36. Dillon Road at Vista Del Norte: Widen and restripe the east leg to provide two exclusive westbound left-turn lanes. Install a traffic signal and design for eight-phase operation. Stripe crosswalks on all four legs.
- 37. Dillon Road at I-10 Westbound Ramps: Install a traffic signal and design for three-phase operation. Stripe crosswalks across west and east legs.
- 38. Dillon Road at I-10 Eastbound Ramps: Install a traffic signal and design for three-phase operation. Stripe crosswalks across west and east legs.
- 40. Magnolia Street/Tyler Street at Avenue 50: Widen and restripe the east leg to provide an exclusive eastbound left-turn lane. Install a traffic signal and design for three-phase operation with protected/permissive left-turn phasing for westbound Avenue 50. Stripe crosswalks across all four legs.
- 46. Tyler Street at 50th Avenue: Widen and restripe the south leg to provide a second exclusive northbound right-turn lane and a third southbound departure lane. Widen and restripe the west leg to provide an exclusive eastbound right-turn lane. Widen and restripe the east leg to provide two exclusive westbound left-turn lanes and a second eastbound departure lane. Install a traffic signal and design for three-phase operation with split phasing for all approaches. Stripe crosswalks across south and east legs.
- 47. Tyler Street at SR-86: Widen and restripe the south leg to provide two exclusive northbound left-turn lanes, a northbound through lane, and a second southbound departure lane. Widen and restripe the north leg to provide an exclusive southbound left-turn lane, a second southbound through lane, a second exclusive southbound right-turn lane, and a second northbound departure lane. Widen and restripe the west leg to provide a second exclusive eastbound left-turn lane and a third westbound departure lane. Widen and restripe the east leg to provide a third westbound through lane. Modify the existing traffic signal and provide southbound and eastbound right-turn overlap phasing.
- 49. Polk Street at 50th Avenue: Widen and restripe the east leg to provide an exclusive westbound left-turn lane. Install a traffic signal and design for three-phase operation with protected/permissive left-turn phasing for westbound 50th Avenue. Stripe crosswalks across all four legs.
- 50. Polk Street at Avenue 52: Widen and restripe the north leg to provide an exclusive southbound right-turn lane. Widen and restripe the west leg to provide an exclusive eastbound left-turn lane and a second westbound departure lane. Widen and restripe the east leg to provide a westbound through lane. Install a traffic signal and design for three-phase operation. Stripe crosswalks across the north and west legs.

- 51. SR-86 at Avenue 52: Widen and restripe the south leg to provide a third northbound through lane and a third southbound departure lane. Widen and restripe the north leg to provide a third southbound through lane and a third northbound departure lane. Widen and restripe the west leg to provide an exclusive eastbound left-turn lane, an eastbound through lane, and a second westbound departure lane. Widen and restripe to provide an exclusive westbound left-turn lane, a westbound through lane, an exclusive westbound right-turn lane, and a second eastbound departure lane. Modify the existing traffic signal to provide westbound right-turn overlap phasing.
- 52. Fillmore Street at Avenue 50: Widen and restripe the south leg to provide an exclusive northbound left-turn lane. Widen and restripe the west leg to provide a shared eastbound through/right-turn lane and a second westbound departure lane. Widen and restripe the east leg to provide an exclusive westbound left-turn lane, a westbound through lane, and a second eastbound departure lane. Install a traffic signal and design for five-phase operation with protected/permissive left-turn phasing for westbound Avenue 50. Stripe crosswalks across all four legs.
- 53. Fillmore Street at Avenue 52: Install a traffic signal and design for two-phase operation. Stripe crosswalks across all four legs.

Figure 9-1 presents the External Network Vicinity Map. ***Figure 9-2*** presents the planned and recommended traffic improvements for the key study intersections for the Year 2045 With Project traffic conditions.

10.0 TRAFFIC SIGNAL WARRANT ANALYSIS

The level of service analyses at the key unsignalized impacted study intersections that are recommended to be signalized are supplemented with an assessment of the need for signalization of those intersections. This assessment is made on the basis of signal warrant criteria adopted by Caltrans. For this study, the need for signalization is assessed on the basis of the peak-hour traffic signal warrant. Warrant #3 described in the *California Manual on Uniform Traffic Control Devices (MUTCD).* Warrant #3 has two parts: 1) Part A evaluates peak hour vehicle delay for traffic on the minor street approach with the highest delay and 2) Part B evaluates peak-hour traffic volumes on the major and minor streets. This method provides an indication of whether peak-hour traffic conditions or peak-hour traffic volume levels are, or would be, sufficient to justify installation of a traffic signal. Other traffic signal warrants are available; however, they cannot be checked under future conditions (Without Project/Buildout Without and With Project) because they rely on data for which forecasts are not available (such as accidents, pedestrian volume, and four- or eight-hour vehicle volumes).

The decision to install a traffic signal should not be based purely on the warrants alone. Instead, the installation of a signal should be considered and further analysis performed when one or more of the warrants are satisfied. Additionally, engineering judgment is exercised on a case-by-case basis to evaluate the effect a traffic signal will have on certain types of accidents and traffic conditions at the subject intersection as well as at adjacent intersections.

10.1 External Network Year 2045 With Project Traffic Conditions

The results of the peak-hour traffic signal warrant analysis for the Year 2045 With Project traffic conditions are summarized in column (3) of *Table 10-1*. The results indicate that the following twelve (12) key unsignalized intersections have future traffic conditions that would exceed the volume thresholds of Warrant #3, Part A and Part B for the AM and PM peak hours:

- 9. Jackson Street at Avenue 50
- 10. Jackson Street at Avenue 52
- 19. Calhoun Street at Avenue 52
- 36. Dillon Road at Vista Del Norte
- 37. Dillon Road at I-10 Westbound Ramps
- 38. Dillon Road at I-10 Eastbound Ramps
- 40. Magnolia Street/Tyler Street at Avenue 50
- 46. Tyler Street at 50th Avenue
- 49. Polk Street at 50th Avenue
- 50. Polk Street at Avenue 52
- 52. Fillmore Street at Avenue 50
- 53. Fillmore Street at Avenue 52

The analysis and the recommended improvements show that the above-mentioned twelve (12) intersections under the Year 2045 With Project traffic conditions are recommended to be signalized. With signalization of these twelve (12) intersections, which are warranted, these intersections are forecast to operate at acceptable service levels during the AM and PM peak hours. Thus, it is concluded from *Table 10-1* that traffic signals are justified at the above mentioned unsignalized intersections.

The Year 2045 With Project Traffic Conditions Traffic Signal Warrant Analysis worksheets are contained in ***Appendix G***.

Notes:

- Signal Warrant checks based on Warrant 3, Part A - Peak-Hour Delay Warrant and Part B - Peak-Hour Volume Warrant contained in the *California MUTCD.*

[18] *Appendix G* contains the Traffic Signal Warrant Analysis worksheets for the key unsignalized impacted study intersections.

11.0 PROJECT FAIR SHARE ANALYSIS

The transportation impacts associated with the development of the proposed Project were determined based on the future conditions analysis with the proposed Project. The key study locations forecast to operate at adverse levels of service are discussed below. As such, the proposed Project's "fair share" of the recommended improvements has been calculated for the key study locations that are forecast to operate at adverse levels of service.

It should be noted that a mechanism by which the Project, per each development phase, will pay its fair share is recommended to be developed in coordination with the City and affected jurisdictions and shall be included in the Project Specific Conditions of Approval. Each Focused Traffic Study prepared in conjunction with the various phases of development of the Project shall calculate the dollar figure specific to the recommended improvements utilizing the fair share percentages calculated as part of their respective Focused Traffic Study.

11.1 External Network Year 2045 With Project Fair Share

Table 11-1 presents the AM and PM peak hours Project fair share percentages at the key study intersections that are forecast to operate at adverse levels of service under Year 2045 With Project traffic conditions. As presented in *Table 11-1*, the first column (1) presents the existing traffic volume at the intersection. The second column (2) presents the Year 2045 Without Project traffic volume. The third column (3) presents the Year 2045 With Project traffic volume. The fourth column (4) represents the Project fair share based on the following formula:

- Project Fair Share (4) = [Column (3) – Column (2)] / [Column (3) – Column (1)] * 100

The AM and PM peak hours Project fair share percentages at the key study intersections that are forecast to operate at adverse levels of service under Year 2045 with Project traffic conditions range from **-7.13%** to **+50.35**% as shown in *Table 11-1*. It should be noted that the negative fair share values between the 2045 Without and 2045 With Project Traffic Conditions reflects the regional shift in traffic volume with the construction of the Project and the Avenue 50 interchange.

TABLE 11-1
EXTERNAL NETWORK YEAR 2045 WITH PROJECT TRAFFIC CONDITIONS
INTERSECTION FAIR SHARE CONTRIBUTION

Key Intersection		Jurisdiction	Impacted Time Period	(1) Existing Volume	(2) Year 2045 Without Project Volume	(3) Year 2045 With Project Volume	(4) Project Fair Share Responsibility
9.	Jackson Street at Avenue 50	Indio	AM	1,830	2,703	2,649	-6.59%[19]
			PM	1,613	2,364	2,314	-7.13%[19]
10.	Jackson Street at Avenue 52	Indio	AM	1,390	2,277	2,291	**1.55%**
			PM	1,145	1,969	1,973	0.48%
13.	Golf Center Parkway at I-10 Westbound Ramps	Indio/ Caltrans	AM	1,841	3,024	3,271	**17.27%**
			PM	--	--	--	--
14.	Golf Center Parkway at I-10 Eastbound Ramps	Indio/ Caltrans	AM	--	--	--	--
			PM	1,732	2,972	3,184	**14.60%**
16.	Golf Center Pkwy/Lorraine St at Highway 111	Indio	AM	1,416	2,134	2,329	**21.36%**
			PM	1,553	2,339	2,444	11.78%
19.	Calhoun Street at Avenue 52	Riverside County	AM	1,121	2,056	2,074	**1.89%**
			PM	906	1,731	1,731	0.00%
22.	Van Buren Street at Avenue 52	Coachella	AM	1,337	2,891	2,911	**1.27%**
			PM	--	--	--	--
32.	Cesar Chavez Boulevard at Avenue 52	Coachella	AM	2,009	3,832	3,939	5.54%
			PM	2,120	3,817	3,953	**7.42%**
34.	Leoco Lane at Avenue 50	Coachella	AM	--	--	--	--
			PM	1,161	1,903	1,888	-2.06%[19]
36.	Dillon Road at Vista Del Norte	Coachella	AM	978	2,381	2,699	18.48%
			PM	845	2,103	2,406	**19.41%**
37.	Dillon Road at I-10 Westbound Ramps	Coachella/ Caltrans	AM	1,061	2,668	2,963	15.51%
			PM	984	2,322	2,727	**23.24%**
38.	Dillon Road at I-10 Eastbound Ramps	Coachella/ Caltrans	AM	948	2,220	2,653	25.40%
			PM	1,055	2,374	2,862	**27.01%**
40.	Magnolia Street/Tyler Street at Avenue 50	Coachella	AM	962	1,979	2,107	**11.18%**
			PM	1,031	2,054	2,090	3.40%

Notes:

- Net Project Percent Increase (4) = [Column (3) – Column (2)] / [Column (3) – Column (1)]
- **Bold Project Fair Share Responsibility** is based on worse case

[19] The negative fair share value between the 2045 Without and 2045 With Project Traffic Conditions reflects the regional shift in traffic volume with the construction of the Project and the Avenue 50 interchange.

TABLE 11-1 (CONTINUED)
EXTERNAL NETWORK YEAR 2045 WITH PROJECT TRAFFIC CONDITIONS
INTERSECTION FAIR SHARE CONTRIBUTION

Key Intersection	Jurisdiction	Impacted Time Period	(1) Existing Volume	(2) Year 2045 Without Project Volume	(3) Year 2045 With Project Volume	(4) Project Fair Share Responsibility
46. Tyler Street at	Coachella	AM	67	2,407	2,626	**8.56%**

Avenue 50		PM	18	1,300	2,600	**50.35%**
53. Fillmore Street at	Coachella	AM	90	1,712	1,909	10.83%
Avenue 52		PM	80	1,653	1,866	**11.93%**

Notes:

- Net Project Percent Increase (4) = [Column (3) – Column (2)] / [Column (3) – Column (1)]
- **Bold Project Fair Share Responsibility** is based on worse case

[20] The negative fair share value between the 2045 Without and 2045 With Project Traffic Conditions reflects the regional shift in traffic volume with the construction of the Project and the Avenue 50 interchange.

12.0 CALTRANS FACILITIES ANALYSIS

Caltrans requires the use of analysis methods provided in the Highway Capacity Manual 7 (*HCM 7)* for the analysis of ramp intersections. Caltrans "endeavors to maintain a target LOS at the transition between LOS "C" and LOS "D" on State highway facilities; it does not require that LOS "D" (shall) be maintained. However, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. For this analysis, LOS D is the target level of service standard and will be utilized to assess the Project impacts at the state-controlled study intersections, consistent with City of Coachella and City of Indio requirements.

Ramp Intersection Capacity Analyses were conducted for the following fourteen (14) state-controlled key study intersections:

1. Monroe Street at I-10 WB Ramps
2. Monroe Street at I-10 EB Ramps
5. Jackson Street at I-10 WB Ramps
6. Jackson Street at I-10 EB Ramps
13. Golf Center Parkway at I-10 WB Ramps
14. Golf Center Parkway at I-10 EB Ramps
28. Dillon Road at SR-86 NB Ramps
29. Dillon Road at SR-86 SB Ramps
37. Dillon Road at I-10 WB Ramps
38. Dillon Road at I-10 EB Ramps
47. Tyler Street at SR-86
51. SR-86 at Avenue 52
54. Avenue 50 at I-10 WB Ramps
55. Avenue 50 at I-10 EB Ramps

12.1 Ramp Intersection Capacity Analysis

As shown in ***Table 7-1***, presented previously in *Section 7.0*, the intersections of Golf Center Parkway at I-10 WB Ramps, Golf Center Parkway at I-10 EB Ramps, Dillon Road at I-10 WB Ramps, Dillon Road at I-10 EB Ramps, Tyler Street at SR-86, and SR-86 at Avenue 52 are forecast to operate at unacceptable levels of service during the AM and/or PM peak hours under Year 2045 With Project traffic conditions. However, the implementation of recommended improvements at the deficient location improves these intersections to acceptable service levels.

12.2 Off-Ramp Vehicle Queuing Analysis

The *Caltrans Interim Land Development and Intergovernmental Review (LDIGR) Safety Review Practitioners Guidance*, dated July 2020, provides direction on a simplified safety analysis approach that reduces the risk to all road users and that focuses on multi-modal conflict analysis as well as access management issues. District traffic safety staff are encouraged to consider the proposed Project's potential influence on safety on state roadways, including the following factors:

- Increased presence of pedestrians and bicyclists
- Degradation of the walking and bicycling environment and experience
- New pedestrian and bicyclist connection desires
- Multimodal conflict points, especially at intersections and project access locations
- Change in traffic mix such as an increase in bicyclists or pedestrians where features such as shoulders or sidewalks may not exist or are inconsistent with facility design (sidewalks, bike and multi-user paths, multimodal roadways, etc.)
- Increased vehicular speeds
- Transition between free flow and metered flow
- Increased traffic volumes
- Queuing at off-ramps resulting in slow or stopped traffic on the mainline or speed differentials between adjacent lanes
- Queuing exceeding turn pocket length that impedes through-traffic

The proposed Project does not take direct access from a State facility; therefore, the Project has not been reviewed for factors pertaining to site access or local roadways. However, the proposed Project is expected to generate new Project trips at the I-10 Freeway ramps at intersections #1, #5, #13, #38, #54, and #55. Therefore, an analysis of the Project's effect on off-ramp queuing was prepared in order to determine if the Project would cause, or contribute towards, slowing or stopped traffic on mainline travel lanes resulting in unsafe speed differentials between adjacent lanes.

Pursuant to prior direction from Caltrans staff, off-ramp queueing was analyzed using the Highway Capacity Manual (HCM) method for signalized intersections. As described in ***Section 1.0*** above, the off-ramp queuing calculations were prepared utilizing the HCM 7 operational methodology for signalized intersections. The corresponding weekday AM peak hour and PM peak hour HCM 7 worksheets for purposes of determining the 95th percentile vehicle queues are contained in *Appendix E*.

The queuing analysis was prepared for Year 2045 With Project traffic conditions. The freeway off-ramp intersection approaches were reviewed in terms of expected maximum vehicle queues (i.e. 95th percentile queues) which represent the maximum back of vehicle queues with 95th percentile traffic volumes. The corresponding maximum vehicle queue lengths were then compared to the total ramp

storage lengths (i.e. the available storage length as measured from the applicable off-ramp/frontage road lane striping to the respective off-ramp approach limit lines/merge points).

12.2.1 *Year 2045 With Project Traffic Conditions*

As shown in ***Table 12-1***, adequate storage is provided to accommodate the forecast 95th percentile queues under Year 2045 With Project traffic conditions at the six (6) off-ramp locations, which includes the planned construction of the Monroe Street Interchange Project and the Avenue 50 Interchange Project. The Project is expected to neither cause nor contribute towards vehicle queuing which extends back into the I-10 Freeway mainline travel lanes for Year 2045 With Project traffic conditions. Therefore, the proposed Project is not anticipated to negatively influence safety on the State Highway System.

TABLE 12-1

YEAR 2045 WITH PROJECT PEAK HOUR FREEWAY OFF-RAMP QUEUING ANALYSIS[21]

Key Ramp Intersection	Proposed/ Estimated Storage Provided (feet)	Year 2045 With Project Traffic Conditions				Year 2045 With Project With Improvements Traffic Conditions			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Max. Queue (feet)	Adequate Storage (Yes / No)	Max Queue (feet)	Adequate Storage (Yes / No)	Max. Queue (feet)	Adequate Storage (Yes / No)	Max. Queue (feet)	Adequate Storage (Yes / No)
1. Monroe Street at I-10 WB Ramps									
Westbound Left-Turn	1,480’	265’	Yes	211’	Yes	--	--	--	--
Westbound Shared Left-Turn/Through	580'	266’	Yes	210’	Yes	--	--	--	--
Westbound Right-Turn	320’	269’	Yes	196’	Yes	--	--	--	--
5. Jackson Street at I-10 WB Ramps									
Westbound Shared Left-Turn/Through	1,170’	96’	Yes	51’	Yes	--	--	--	--
13. Golf Center Parkway at I-10 WB Ramps									
Westbound Left-Turn	400’	--	--	--	--	390’	Yes	93’	Yes
Westbound Shared Left-Turn/Through	1,060’	1,043’	Yes	200’	Yes	389’	Yes	93’	Yes
Westbound Right-Turn	315’	383’	Yes[22]	260’	Yes	537’	Yes	260’	Yes

[21] Queue is based on the *95th Percentile Queue* and is reported in total queue length (feet) per lane for signalized intersections.

[22] Although the anticipated queue exceeds the striped storage, the spillover queue can be accommodated within the off-ramp.

TABLE 12-1 (CONTINUED)
YEAR 2045 WITH PROJECT PEAK HOUR FREEWAY OFF-RAMP QUEUING ANALYSIS[23]

Key Ramp Intersection	Proposed/ Estimated Storage Provided (feet)	Year 2045 With Project Traffic Conditions				Year 2045 With Project With Improvements Traffic Conditions			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Max. Queue (feet)	Adequate Storage (Yes / No)	Max Queue (feet)	Adequate Storage (Yes / No)	Max. Queue (feet)	Adequate Storage (Yes / No)	Max. Queue (feet)	Adequate Storage (Yes / No)
38. Dillon Road at I-10 EB Ramps									
Eastbound Shared Left-Turn Through	1,675’	877’	Yes	1,186’	Yes	286’	Yes	324’	Yes
Eastbound Right-Turn	1,340’	76’	Yes	168’	Yes	248’	Yes	405’	Yes
54. Avenue 50 at I-10 WB Ramps									
Westbound Left-Turn	2010’	262’	Yes	189’	Yes	--	--	--	--
Westbound Right-Turn	575’	294’	Yes	194’	Yes	--	--	--	--
55. Avenue 50 at I-10 EB Ramps									
Eastbound Left-Turn	2,140’	226’	Yes	301’	Yes	--	--	--	--
Eastbound Shared Left-Turn/Right Turn	685’	226’	Yes	301’	Yes	--	--	--	--
Eastbound Right-Turn	685’	159’	Yes	167’	Yes	--	--	--	--

[23] Queue is based on the *95th Percentile Queue* and is reported in total queue length (feet) per lane for signalized intersections.

13.0 VEHICLE MILES TRAVELED (VMT) ANALYSIS

LLG has prepared the approved *Vehicle Miles Traveled (VMT) Analysis for the Proposed KPC Coachella Specific Plan Technical Memorandum*, dated December 8, 2022, which summarizes the County of Riverside VMT screening criteria, analysis methodology, VMT impact thresholds, VMT analysis, and conclusion for the KPC Coachella Specific Plan. ***Appendix H*** includes the technical memorandum.

13.1 VMT Mitigation Measures

As noted within the technical memorandum, when project VMT exceeds the threshold(s) of significance, the project will need to mitigate its CEQA transportation impact. The type and size of the project will determine the most appropriate mitigation strategies for VMT impacts. The recommended mitigation measures for the proposed Project's office land use consists of:

- T-7. Implement Commute Trip Reduction Marketing
- T-8. Providing Ridesharing Program

It should be noted that the above recommended mitigations measures will completely offset the Project's baseline and cumulative VMT impacts for the office and retail land uses

Please see *Appendix H* for more details regarding the VMT analysis and the recommended mitigation measures.

APPENDIX A

APPROVED TRAFFIC STUDY SCOPE OF WORK

To:	Mr. Gabriel Perez Development Services Director City of Coachella	Date:	September 27, 2022
From:	Keil D. Maberry, P.E., Principal Zawwar Saiyed, P.E., Associate Principal Angela Besa, P.E., Transportation Engineer II Linscott, Law & Greenspan, Engineers	LLG Ref:	2.22.4560.1
Subject:	*Traffic Impact Analysis (TIA) Scope of Work for KPC Coachella Specific Plan – Coachella, California*		

Linscott, Law & Greenspan, Engineers (LLG) is pleased to submit the following Traffic Impact Analysis (TIA) Scope of Work (SOW) for the KPC Coachella Specific Plan (herein referred to as the "Project") located in the City of Coachella, Riverside County, California.

The work program provided herein is based on our prior work experience within the City of Coachella, City's criteria, discussions with City Staff and our understanding of the Project. The TIA will satisfy the traffic impact requirements of the City of Coachella, the *Riverside County Transportation Analysis Guidelines Level of Service Vehicle Miles Traveled (December 2020)* and the *Riverside County Congestion Management Program (CMP).*

Traffic Impact Analysis (TIA) Scope of Work

1. **Project Description and Location**: The Project site is generally located on the north side of the I-10 Freeway in the City of Coachella, Riverside County, California. The Project applicant is proposing a Specific Plan for the development of various mixed-uses on approximately 2,700 acres of land. The KPC Coachella Specific Plan area has been organized into Villages and Planning Areas. There are a total of five Villages. ***Tables 1*** through ***6*** presents the land use breakdown by Village. Primary access for the Project site will be provided via the proposed Avenue 50/I-10 Interchange as well as an extension of the Vista Del Norte road from the west. The Specific Plan is anticipated to be completed by Buildout Year 2045. ***Figure 1*** presents a Vicinity Map, which illustrates the general location of the Project and depicts the existing study locations and surrounding street system. ***Figure 2*** presents the existing aerial photograph of the Project site. ***Figure 3*** presents the proposed Project land use plan.

2. **Vehicle Miles Traveled (VMT)**: Prepare a Vehicle Miles Traveled (VMT) Analysis Technical Memorandum for the proposed Project for CEQA purposes. This Technical Memorandum will present the VMT screening criteria, analysis

methodology, impact thresholds, analysis, findings, and conclusions based on City/County and/or OPR criteria.

3. **Project Trip Generation**: The trip generation potential of the proposed Project has been estimated using trip rates contained in the *11th Edition of Trip Generation, published by the Institute of Transportation Engineers (ITE), [Washington, D.C., 2021]*, operational characteristics of the theater, and *County of San Diego's Traffic Needs Assessment of Tribal Development Projects in the San Diego Region*, published by the San Diego Association of Governments [March 2003]. ***Table 7*** shows the Project trip generation rates. ***Tables 8*** through ***14*** show the Project trip generation forecast by Village.

   The total proposed Project Buildout is forecast to generate approximately 132,683 daily gross trips, with 8,240 gross trips (3,742 inbound, 4,498 outbound) produced in the AM peak hour and 11,631 gross trips (6,085 inbound, 5,546 outbound) produced in the PM peak hour on a "typical" weekday.

   The total proposed Project Buildout is forecast to generate approximately 84,917 daily net external trips, with 5,686 net external trips (2,465 inbound, 3,221 outbound) produced in the AM peak hour and 7,909 net external trips (4,224 inbound, 3,685 outbound) produced in the PM peak hour on a "typical" weekday.

4. **Long-Term Buildout Traffic:** Prepare RIVCOM traffic model runs for baseline conditions and buildout conditions for the AM and PM peak periods and daily traffic conditions and develop future volumes using the following methodology:

   - Peak period traffic volumes will be converted to peak hour (i.e., one-hour) traffic volumes using a conversion factor of 0.38 for the AM peak hour and 0.28 for the PM peak hour;
   - Calculate the difference between the baseline and buildout peak period traffic volumes and convert to AM and PM peak hour (i.e., one-hour) link traffic volumes;
   - Link traffic volumes (i.e., two-way directional traffic volumes on each roadway segment) will be post-processed using the "b-turns" program and the relationship of the base year validation model run output to the base year "ground" traffic counts to develop buildout AM and PM peak hour traffic volumes.

5. **Traffic Impact Analysis Scenarios:** The following scenarios are those for which Delay and corresponding LOS calculations will be performed at the key study

intersections for weekday AM and PM peak hours (for existing and long-term) traffic conditions:

1. Existing Traffic Conditions,
2. Year 2045 Without Project Traffic Conditions,
3. Year 2045 With Project Buildout Traffic Conditions, and
4. Scenario (3) With Mitigation, if any.

The Level of Service (LOS) calculations will be based on the *Highway Capacity Manual 7 (HCM 7)* method of analysis for signalized and unsignalized intersections. See ***Attachment A*** for the parameters to be used in this analysis. It should be noted that Project Buildout (Year 2045) will be analyzed on a Programmatic-level, such that Project phases (Villages) will be required to perform site specific traffic studies to determine Project phase impacts.

6. **Study Area Intersections:** Fifty-three (53) existing and two (2) future key study intersections were selected for evaluation of the external network. The total fifty-five (55) key study intersections listed below provide both local and regional access to the study area and define the extent of the boundaries for this traffic analysis:

    1. Monroe Street at I-10 WB Ramps (Indio/Caltrans)
    2. Monroe Street at I-10 EB Ramps (Indio/Caltrans)
    3. Monroe Street at Highway 111 (Indio)
    4. Monroe Street at Avenue 48 (Indio)
    5. Jackson Street at I-10 WB Ramps (Indio/Caltrans)
    6. Jackson Street at I-10 EB Ramps (Indio/Caltrans)
    7. Jackson Street at Highway 111 (Indio)
    8. Jackson Street at Avenue 48 (Indio/Coachella)
    9. Jackson Street at Avenue 50 (Indio)
    10. Jackson Street at Avenue 52 (Indio)
    11. Golf Center Parkway at Avenue 44 (Indio)
    12. Golf Center Parkway at Indio Springs Drive (Indio)
    13. Golf Center Parkway at I-10 WB Ramps (Indio/Caltrans)
    14. Golf Center Parkway at I-10 EB Ramps (Indio/Caltrans)
    15. Golf Center Parkway at Avenue 45 (Indio)
    16. Golf Center Parkway/Lorraine Street at Highway 111 (Indio)

17. Calhoun Street at Avenue 48 (Indio/Coachella)
18. Calhoun Street at Avenue 50 (Coachella)
19. Calhoun Street at Avenue 52 (Riverside County)
20. Van Buren Street at Avenue 48 (Indio/Coachella)
21. Van Buren Street at Avenue 50 (Coachella)
22. Van Buren Street at Avenue 52 (Coachella)
23. Dillon Road at Avenue 48 (Indio/Coachella)
24. Highway 111 at Avenue 48 (Indio)
25. Dillon Road at Cabazon Road/Avenue 48 (Indio)
26. Highway 111 at Avenue 49 (Coachella)
27. Dillon Road at Harrison Street (Coachella)
28. Dillon Road at SR-86 NB Ramps (Coachella/Caltrans)
29. Dillon Road at SR-86 SB Ramps (Coachella/Caltrans)
30. Cesar Chavez Street at Grapefruit Boulevard (Coachella)
31. Cesar Chavez Street at Avenue 50 (Coachella)
32. Cesar Chavez Street at Avenue 52 (Coachella)
33. Leoco Lane at Avenue 50 (Coachella)
34. Grapefruit Boulevard at Leoco Lane (Coachella)
35. Terra Lago Parkway at Avenue 44 (Indio/Coachella)
36. Dillon Road at Vista Del Norte (Coachella)
37. Dillon Road at I-10 WB Ramps (Coachella/Caltrans)
38. Dillon Road at I-10 EB Ramps (Coachella/Caltrans)
39. Dillon Road at Vista Del Sur (Coachella)
40. Magnolia Street/Tyler Street at Avenue 50 (Coachella)
41. Sunset Drive at Avenue 52 (Coachella)
42. Grapefruit Boulevard at Sunset Drive (Coachella)
43. Dillon Road at Fargo Canyon Road (Riverside County)
44. Dillon Road at Avenue 44 (Indio/Coachella)
45. Tyler Street at Vista Del Norte (Coachella)
46. Tyler Street at 50th Avenue (Coachella)
47. Tyler Street at SR-86 (Coachella)
48. Tyler Street at Avenue 52 (Coachella)
49. Polk Street at 50th Avenue (Coachella)

50. Polk Street at Avenue 52 (Coachella)
51. SR-86 at Avenue 52 (Coachella/Caltrans)
52. Fillmore Street at Avenue 50 (Coachella)
53. Fillmore Street at Avenue 52 (Coachella)
54. Avenue 50 at I-10 WB Ramps *[Future Intersection]* (Coachella/Caltrans)
55. Avenue 50 at I-10 EB Ramps *[Future Intersection]* (Coachella/Caltrans)

It should be noted that five (5) key study intersections within the internal network of the Specific Plan will also be evaluated. These five (5) key internal study intersections are shown on *Figure 3* and are listed below:

1. Internal Study Intersection 1
2. Internal Study Intersection 2
3. Internal Study Intersection 3
4. Internal Study Intersection 4
5. Internal Study Intersection 5

8. <u>Off-Ramp Queuing Analysis:</u> In accordance with Caltrans guidelines, conduct Off-Ramp Queuing Analysis for Caltrans ramp locations.

9. <u>Impact Criteria and Thresholds:</u> The following details the impact criteria and minimum acceptable LOS to be considered in this traffic analysis:

<u>City of Coachella</u>
According to the City of Coachella General Plan, LOS D is the maximum acceptable level of service and should be maintained.

<u>City of Indio</u>
According to the City of Indio General Plan, LOS D is the maximum acceptable level of service and should be maintained.

<u>County of Riverside</u>
According to the County of Riverside General Plan, the following countywide target Levels of Service shall be maintained:

- LOS C shall apply to all development proposals in any area of the Riverside County not located within the boundaries of an Area Plan, as well as those areas located within the following Area Plans: REMAP, Eastern Coachella Valley, Desert Center, Palo Verde Valley, and those non-Community Development areas of the Elsinore, Lake Mathews/Woodcrest, Mead Valley and Temescal Canyon Area Plans.

- LOS D shall apply to all development proposals located within any of the following Area Plans: Eastvale, Jurupa, Highgrove, Reche Canyon/Badlands, Lakeview/Nuevo, Sun City/Menifee Valley, Harvest Valley/Winchester, Southwest Area, The Pass, San Jacinto Valley, Western Coachella Valley and those Community Development Areas of the Elsinore, Lake Mathews/Woodcrest, Mead Valley and Temescal Canyon Area Plans.

- LOS E may be allowed by the Board of Supervisors within designated areas where transit-oriented development and walkable communities are proposed.

10. **Mitigation and Fair-Share Contribution Percentage**: Conduct mitigation(s) and calculate fair-share contribution percentage(s) at the significantly impacted location(s), if any, for the scenarios listed in *Task 4* above.

11. **Multimodal Analysis:** Evaluate opportunities to implement an active transportation network for the project, including pedestrian, bicycle, NEV, and transit connections and provide as-needed recommendations.

12. **Traffic Signal Warrant Analysis**: Conduct traffic signal warrant analysis at the significantly impacted location(s) where a traffic signal is recommended as a mitigation measure, if any, for the scenarios listed in *Task 4* above.

* * * * * * * * * * *

We appreciate the opportunity to provide this Traffic Impact Analysis Scope of Work. Should you have any questions, please call us at (949) 825-6175. Thank you.
