## **4 Meter Replacement Procedures**

**4.1 Setting Identification** – Upon arrival to each designated meter installation site, installer shall match the site address to the MXU number and Serial number of the meter on the CWA meter replacement work order form (work order) and the meter in the box. If the numbers in the box match, the installer may proceed. Should there be a discrepancy on the work order and MXU and the subject meter number, installer shall verify site location, note discrepancy on provided work orders and notify the project coordinator immediately. The project coordinator will review the account and provide further instructions.

**4.2 Customer contact** – Installer shall contact the customer by knocking on customer's door and advising them of the nature of their visit explaining that the water service will be interrupted for a short period of time in order to complete the work. If no one comes to the customer's door and movement on the meter is present, the installer shall delay setting the meter temporarily and return a short time later. If it appears that no one is home and the meters is not indicating flow, installer shall proceed with the exchange. In cases where the customer refuses to have the meter replaced, Contractor is to skip replacement, Make a note on the work order, and report to CWA within 24 hours.

**4.3 Isolation at house** – To prevent water drainage into the meter box, the contractor shall attempt to isolate the customer's line first inside the meter box at the customer's valve and second at the house valve. After customer's notification, if the customer's valve is not working, the installer shall locate customer's house shut-off valve, evaluate the condition of house valves and close the house valve prior to meter replacement if possible. (Debris in meter box should be removed prior to disruption of valve service, 50% of the meter boxes in the system may require some soil removal due to gophers and common soil intrusion). Care should be taken when operating customer's valve and house valve. Do not use extreme force to close. If valve is not operating, change meter with valve open and evacuate water drainage. All debris from meter box shall be removed prior to leaving each job site. 90% of customer service piping material are of PVC and the rest a variety of copper, galvanized and brass. Any damages to house valves shall be billed to contractor.

**4.4 Isolation at angle stop** – Installer shall place safety cones at curb and walk way. Installer shall then shut off the angle meter stop taking care not to make abrupt movements which may damage angle stop. NOTE: if angle stop is frozen or difficult to operate do not force, skip installation and report to CWA. If angle stop is frozen or difficult to operate do not force, skip installation and report to CWA. IF angle stop is in the off position prior to removal of meter, angle stop will need to be put back in the off position after new meter has been installed and the line has been flushed. Note on work order angle stop was found and left off.

**4.5 Removal of meter** – The existing domestic water meter should be removed with care and be sure to remove the old gaskets and any residual gasket materials. Please note that all old meters need to be saved and returned to CWA. Some soil clearance in the meter box may be required so that the contractor can safely accommodate for the removal process. All waste resulting from the clearing of a meter box as well as replacing the gaskets and lids must be cleaned up and disposed of properly by the contractor and will be the responsibility of the contractor to dispose of such material at a City approved location.

**4.6 Installation of new meter** – make certain the arrow on water meter is pointing in the direction of water flow, place the new gaskets in the coupling and thread the couplings on both sides in a clock wise direction. Add a new gaskets at the 3/4 inch to 7/8 inch bushing connections. No Teflon or ant-seize is required for these meter installations.

**4.7 Flushing of line** – Installer should fully open the nearest hose bib at the house then slowly open the angle stop. Check for leaks at the couplings. Close the hose bib after the angle stop valve has been opened fully and leak inspection is complete. Note: Any damages to fixtures due to improper flushing will be billed to contractor.

**4.8 Recording information** – after meter installation has been completed, including flushing and inspection to assure meter is free from leaks. The installer shall then observe the meter to detect any consumption. If the installer observes continued consumption, (at vacant residence) installer will turn water to the off position and notify the project coordinator immediately. The installer shall record all essential replacement information on the individual work order provided. Installer shall record the old meter reading, new meter MXU, date of the meter exchange and the installers name on the work order. Completed work order sheets shall be submitted to the project coordinator daily. Meter replacement data collected from the contractor will be entered into the city software data base which the city will be responsible for.

**4.9 Customer notice** – Should the customer be home during installation of the meter, installer shall notify customer that the work has been completed.

**4.10 Clean up** – Contractor shall make every effort to restore site to its original condition. This shall include cleanup of all debris (in and outside the box). Maintenance of foliage/trees with minimal damage, etc.

**4.11 Workday completion** – at the end of each workday, and no later than the morning of the next business day the contractor shall transmit the completed work orders and any notes regarding the installations to the project coordinator. Removed meters will be returned to CWA, Location of returned meters will be determined by the project coordinator. Care should be given to all old meters, damaged or not. A fee will be charged to the project coordinator for each unreturned meter.
